Re: Arborist Report – 1554 W 25th Street, Miami Beach

Dear Building Official:

On Friday June 11th, 2021, I visited the above-referenced site address to verify and inspect the existing trees to understand their impact on a new residential building.

During the site visit, I photo documented and verified the location of the existing trees being impacted by the proposed building prepared by Roy and Posey Architect, as well as the existing trees within the R.O.W. I verified and measured the trunk diameter at breast height (DBH) in inches, overall height, and crown spread and evaluated the tree’s general condition (GOOD, FAIR, POOR) and its current a future disposition. In addition, I am recommending the following guidelines to protect the existing trees to remain during construction to mitigate impacts to the root system based on the proximity to the proposed building.

Please find the below descriptions, tree photographs, and supporting documentation of the subject tree.

Tree No.	Scientific Name Common Name	DBH/CAL (inches)	HT. (feet)	Canopy (feet)	CRZ/ TPZ (Feet)	Condition/Action/Justification
1	<i>Roystonea regia</i> Royal Palm	18	35	20	CRZ = TPZ =	GOOD/ REMOVE / THE OVERALL HEIGHT IS A MAINTENCE PROBLEM AND FALLING FRONDS ARE POTENTIALLY HAZARDOUS
2	<i>Phoenix canariensis</i> Canary Island Date Palm	24	35	15	CRZ = 15 TPZ = 16	FAIR/ REMAIN / THE PALM IS WITHIN THE ROW AND IS NOT IN CONFLICT WITH PROPOSED IMPROVEMENTS

Tree No.	Scientific Name Common Name	DBH/CAL (inches)	HT. (feet)	Canopy (feet)	CRZ/ TPZ (Feet)	Condition/Action/Justification

Tree Protection and Root System Impact Mitigation Recommendations for Existing Trees to Remain

- For hardwood trees, establish a “Critical Root Zone (CRZ) distance based on one foot for every foot of trunk diameter.
- For hardwood trees, establish a “Tree Protection Zone (TPZ) distance one foot beyond the CRZ.
- Adjust the TPZ based on exiting site conditions, driveway, walls, gates, etc. and construction access as needed.
- Limit heavy construction access from around the tree.
- Apply a 4” to 6” layer of mulch for construction access outside of TPZ.
- Do not store or dump any materials within the TPZ.
- For relocated or existing palms to remain install a tree protection fence no less than 6’ from the trunk.
