TREE WORK PERMIT

PERMIT NUMBER:	UF2021-0832	**ISSUANCE DATE:**	**01-27-2022**
PROJECT MANAGER:	Manuel Sanchez	**EXPIRATION DATE:**	**01-27-2023**

PROPERTY OWNER:	QRIAR ISLAND CORP c/o NEIVA SILVEIRA, LUIS FELIPE
ADDRESS:	7901 KINGSPOINTE PARKWAY Unit: 10 ORLANDO, FL. 32819
CONTACT PHONE #:	(347) 498-5185
EMAIL ADDRESS:	luisfelipe@2futureholding.com

PROJECT LOCATION:	28 STAR ISLAND DR Miami Beach, FL 33139
FOLIO(S):	0242040010235

PERMIT FEES: $1,804.00

APPROVED WORK: Removal of fourteen (14) trees/palms, per L004, REV1: 12.30.2021
One (1) Bottlebrush: X29 (18"DBH) – **Three (3) Christmas palm**: X7, X8, X12 – **One (1) Mango**: X05 (30"DBH) –
Six (6) Royal palm: X01, X11, X15, X16, X21, X22 - **One (1) Umbrella tree**: X17 (10"DBH) – **One (1) Weeping fig**: X4 (19"DBH)
One (1) Brazilian pepper: X30 (10"DBH)

Any trees/palms scheduled for removal and/or relocation not mentioned within the approved work and/or relocation requirements may be removed and/or relocated with no mitigation and/or permit requirement since they are exempt and/or do not meet the criteria to require a permit, as per city code. (Sec. 46-58.)

REPLANTING REQUIREMENTS: Twenty-two (22) trees, per L200A, REV1: 12.30.2021
Five (5) Simpson's stopper at a minimum 12' in height, 2" Caliper, and 6' spread in canopy, Florida Grade No. 1 or better
Five (5) Gumbo Limbo, four (4) Silver buttonwood, three (3) Bayrum, four (4) Pigeon Plum, and one (1) Satin Leaf at a minimum 16' in height, 4" Caliper, and 8' spread in canopy, Florida Grade No. 1 or better

RELOCATION REQUIREMENTS: Relocation of three (3) trees, per L300, REV2: 12.30.2021
One (1) Shavingbrush: X6 – **One (1) Sausage tree**: X9 – **One (1) Live oak**: X10
***All relocated trees must survive for one year after transplant happens or they must be mitigated for. Relocation must be properly documented, and status must be reported to division if they begin to decline or do not survive.**

PROTECTION REQUIREMENTS:
Any trees/palms scheduled to remain, or relocations must be protected during construction. Barriers shall be a minimum of four feet high and shall be constructed of continuous chain link fence with metal posts at eight-foot spacing, or of two-by-four-inch posts with three equally spaced two-by-four-inch rails. Posts may be shifted to avoid roots.

CITY OF MIAMI BEACH
TREE PRESERVATION PROGRAM

SPECIAL PERMIT CONDITIONS:

1. Pursuant to Section 46-62.2 during all site work and construction, no soil, vehicles, heavy equipment (such as bulldozers or back hoes), fill, building materials, construction debris or dead vegetation shall be placed, stored, or deposited within the designated tree protection zone (tree protection barriers shall encompass this area) nor shall there be disposal of any waste material such as paints, oils, solvents, asphalt, concrete, mortar or any other material harmful to trees or understory plants within the tree protection zone. Natural grade shall be maintained within the tree protection zone. In the event that the natural grade of the site is changed as a result of site development such that the safety of the tree(s) may be endangered, tree wells or retaining walls will be required.

2. Pursuant to Section 46-62.2 tree protection barriers shall be constructed at the tree drip line of each tree or cluster of trees designated for preservation or relocation prior to the commencement of constructions activities on-site. These protective barriers shall be constructed of wood, plastic or metal and shall be minimum of four (4) feet above ground level. Protective barriers shall be in place prior to start of any construction and must remain in place until development is completed and the City Tree Preservation staff has authorized their removal in writing.

3. An onsite walk through with City Tree Preservation staff is requested prior to the start of any construction activity, tree removal or relocation activities onsite. The purpose of the walk through is to verify tree protection barriers are properly installed and that the permit conditions are fully understood. Tree protection barriers must remain in place for the duration of the construction project pursuant to Section 46-62.1.

4. Any required cutting, pruning or trimming of trees shall be performed in accordance with the most recent American National Standards (ANSI) A-300 Standard Practices for Tree Care Operations by or under the direct supervision of an ISA Certified Arborist or ASCA Consulting Arborist. All tree cutting, pruning or trimming not performed in accordance with the referenced standards shall be considered a violation and is prohibited by this condition for jurisdictional trees unless this permit is modified and or prior written approval has otherwise been obtained from the City Urban Forester pursuant to Section 46-62.5.

5. Fences and walls shall be constructed to avoid disturbance to any protected tree(s). Post holes and trenches located close to the tree(s) shall be dug by hand and adjusted as necessary, using techniques such as discontinuous footings to avoid damage to major roots pursuant to Section 46-62.2.

6. Underground utility lines shall be placed outside the areas surrounded by tree protective barriers. If outside placement is not possible, disturbance shall be minimized by using techniques such as tunneling, tap and bore or overhead utility lines pursuant to Section 46-62.2.

7. Proper erosion and sediment controls must be installed before any soil disturbing activities can begin.

8. The structures shall be inspected after each rain and repairs made as needed. Sediment deposits should be removed after each rainfall. They must be removed when the level of deposition reaches approximately one-half the height of the barrier.

9. The site contractor is responsible for removing the temporary erosion and sediment control devices after completion of construction and only when areas have been stabilized.

GENERAL PERMIT CONDITIONS

1. Pursuant to Section 46-59.4 this tree permit shall be valid for 1 year from the date of issuance. Should the permitted work not be completed within that timeframe the permit shall be subject to revocation. In such cases a request for license modification prior to permit expiration can be submitted in writing to the Tree Preservation Program.

2. All activities shall be implemented as set forth in plans, specifications and performance criteria as approved by this permit. Any unauthorized impacts to Heritage Trees, Specimen or Non-Specimen trees not included in this permit shall constitute a violation pursuant to Section 46-59.1.

3. This permit and plans shall be kept on-site during all phases of preconstruction activities such as demolition, clearing of parcel, earthwork, re-grading and through construction. The complete permit shall be available for review at the work site upon request of City Tree Preservation staff pursuant to Section 46-59.4.

4. The survival of all trees counted toward canopy mitigation onsite shall be ensured for at least one (1) year from the date the final inspection was completed. If the tree(s) die, they must be replaced by an equivalent Florida Grade No.1 or better tree or palm pursuant to Section 46-59.6. ***Note that the 1-year survival timer starts over for any trees replaced prior to expiration of the initial warranty period.***

5. The final inspection requirements for replacement or relocated trees installed at offsite locations pursuant to Sec. 46-61.6 shall require written approval from the Tree Preservation Program.

6. All strapping, bracing, and staking material shall be removed from all new or relocated trees/palms within 1-year of installation onsite or offsite pursuant to Section 46-61.4.

7. Onsite and offsite tree replanting and or relocation must be verified and approved by the City Tree Preservation staff. The applicant shall notify City Tree Preservation staff through submittal of a final inspection request form no later than six (6) months from project completion pursuant to Section 46-59.6.

8. Any contributions made to the City of Miami Beach Tree Preservation Trust Fund to satisfy canopy replacement requirements will be used to obtain trees, landscaping, irrigation systems, and any other items or materials necessary and proper for the preservation, maintenance, relocation or restoration of trees and the urban forest on any publicly owned land or publicly accessible parcels in Miami Beach. These funds may also be expended by the City of Miami Beach for the Adopt-a-Tree Program, or similar program approved by the City Commission pursuant to Section 46-65.4.

9. Prior to performing any work that would have the potential to impact underground or overhead utilities, the permittee and or contractor shall verify the location of all underground and overhead utility lines and confirm that no utilities will be damaged by the work. Contact Sunshine 811 One-Call at 811 or on the web: http://www.sunshine811.com/ to locate underground utility lines.

10. Tree Preservation Program Tree Information Tags are required per City **LTC #058-2016** and must be affixed by the permittee to any trees proposed for removal or relocation as part of an issued City Tree Work Permit. The property owner shall be responsible for insuring that the tree work permit information sign, as provided by the environment and sustainability department, is displayed until the authorized work is completed. Tree removal/relocation notification tags must be affixed to those permitted trees being removed and/or relocated for a minimum of 7 calendar days for non-specimen trees, 14 calendar days for specimen trees, and 30 days for heritage trees prior to their removal.

ALL WORK SHALL BE IN ACCORDANCE WITH THE CONDITIONS CONTAINED HEREIN. THE PERMITTEE IS RESPONSIBLE FOR COMPLANCE OF ALL CONTRACTORS AND SUBCONTRACTORS WITH THE CONDITIONS AND LIMITATIONS OF THIS PERMIT. ANY NON-EXEMPT TREE(S) (HERITAGE, SPECIMEN OR NON-SPECIMEN) THAT ARE REMOVED OR EFFECTIVELY DESTROYED SHALL CONSTITUTE A VIOLATION OF SECTION 46-57 OF THE CODE OF THE CITY OF MIAMI BEACH, EXCEPT AS EXPRESSLY AUTHORIZED BY THIS PERMIT. THE FAILURE TO COMPLY WITH THE CONDITIONS OF THIS PERMIT WILL SUBJECT THE PERMITTEE, RESPONSIBLE CONTRACTOR(S) OR INDIVIDUAL(S) TO ENFORCEMENT ACTION BY THE CITY, AND SHALL SUBJECT THOSE FOUND IN VIOLATION TO THE PENALTY PROVISION DELINEATED WITHIN SECTION 46-67 OF THE CODE OF THE CITY OF MIAMI BEACH.

THE ISSUANCE OF THIS PERMIT NEITHER RELIEVES NOR AUTHORIZES THE PERMITTEE FROM COMPLIANCE WITH THE REQUIREMENT TO OBTAIN AND COMPLY WITH ALL NECESSARY APPROVALS OR PERMITS FROM THE COUNTY, STATE OR ANY OTHER GOVERNMENT ENTITY HAVING JURISDICTION RELATING TO THE AUTHORIZATIONS CONTAINED HEREIN.

I HAVE READ AND FULLY UNDERSTOOD THE CONDITIONS CONTAINED IN THIS PERMIT. I ACKNOWLEDGE THAT FAILURE TO COMPLY WITH ALL CONDITIONS OF THIS PERMIT MAY RESULT IN PERMIT REVOCATIONS, BOND FORFEITURE, WITHOLDING OF MY CERTIFICATE OF OCCUPANCE AND ENFORCEMENT ACTION BY THE CITY OF MIAMI BEACH. I ASSUME FULL RESPONSIBILITY FOR THE ACTIONS OF ALL OF MY EMPLOYEES, AGENTS AND PERSONS UNDER DIRECT OR INDIRECT CONTRACTUAL OBLIGATION TO ME WITH RESPECT TO COMPLIANCE WITH THE CONDITIONS AND LIMITATIONS CONTAINED WITHIN THIS PERMIT.

Miami, August 31, 2021

Mrs. Jennifer Quiles
BRODSON CONSTRUCTION, INC.
120 NE 27th Street, Suite 100
Miami, FL 33137

Re: Proposed Renovation @
28 Star Island Drive
Miami Beach, FL 33139 (Addendum 1)

Dear Mrs. Quiles:

Pursuant to your request, DYNATECH ENGINEERING CORP. (DEC) completed a Subsoil Investigation on March 1, 2021 at the above referenced project. The purpose of our investigation was to help determine subsoil conditions relative to foundation design of the proposed structure.

A total of (2) standard penetration boring tests were performed according to ASTM-D 1586 down to an average depth of 40' below existing ground surface at the locations shown on the attached sketch.

The following graph was developed as a general condition below existing ground surface at the time of drilling for the subject site (Subsoil conditions are non-homogenous, refer to field boring logs for exact locations and soil description. Average depths are approximate and will vary in the field):

Average Depth From	To	Description
0'-0"	0'-6"	Topsoil and grass
0'-6"	2'-0"	Tan medium sand w/rock fragments
2'-0"	4'-0"	Gray sand w/construction debris
4'-0"	6'-0"	Tan silty sand w/rock fragments
6'-0"	11'-0"	Gray silty sand
11'-0"	24'-0"	Gray silt
24'-0"	32'-0"	White medium sand w/rock fragments
32'-0"	40'-0"	Tan sandy limerock

Groundwater was measured immediately at the completion of each boring and was found at an average depth of approximately 4' below existing ground surface at the time of drilling. This immediate depth to groundwater level should not be relied upon alone for project design considerations. Existing ground surface elevation was not provided to us at the time of drilling. Design engineers must verify existing ground elevations as well as FEMA Flood and County highest and lowest groundwater elevation for their design. Fluctuation in water level is anticipated due to seasonal variations and run off as well as varying ground elevations construction dewatering and pumping activities in the area, king tides, flash flooding, storm surge and global warming. Site contractor must familiarize himself with site conditions in the event groundwater controls and dewatering is needed during construction. Surface flooding may result under hurricane conditions and should be taken into consideration in the design of the project. The contractor shall monitor and make sure that groundwater levels on adjacent properties are not adversely impacted due to the contractors dewatering activities. Specialty groundwater and water proofing contractors shall be consulted for all work below the groundwater level. All dewatering volume & effluent discharge must meet local, State & Federal requirements.

750 WEST 84TH STREET, HIALEAH, FL 33014 PHONE (305) 828-7499 FAX (305) 828-9598 EMAIL:INFO@DYNATECHENGINEERING.COM

Based on our understanding of the proposed structure and our field boring logs; deep foundation systems are needed to support the proposed **structures and slabs** without detrimental settlement.

Alternatives Pile Foundation	Minimum Pile length or refusal B.E.S.L.	Size	Pile Capacity in Tons Compression	Pile Capacity in Tons Tension	Allowable Lateral Capacity in Tons
Pin Piles / push piers *	38' BESL	3"Ø sch.80	5 Tons	1 Ton	N/A
Helical Piles *	38' BESL	3"Ø sch.80	12 Tons	6 Tons	N/A
Auger Cast Piles	38' BESL	12" Ø	25 Tons	12 Tons	1 Ton
Auger Cast Pile	38' BESL	14" Ø	35 Tons	15 Tons	2 Tons

B.E.S.L.: Below Existing Street Level.
*** Minimum depth or until torque is achieved.**

Pile lengths will vary (increase or decrease) depending on actual subsurface conditions. Existing land elevation was not provided to us at this time; the estimated pile length will depend on proposed surface elevations and grades. Pile length will need to be adjusted accordingly once final designs are complete. Predrilling, pre punch may be required due to hard rock. It is common to encounter soft, sand /silt pockets in rock formations. Any encountered soft sand pockets during pile installation must be drilled deeper to achieve capacity as directed on site by our geotechnical engineer.

For computer structural modeling of the building foundation system initial vertical spring constants of 500 Kpi for compression and 250 Kpi for tension may be used. The vertical spring constant values is the work pile load divided by estimated pile settlement and is based on our experience and review of available pile load tests data and settlement estimates in similar subsurface conditions and shall be refined as the structural model is developed. Point of fixity for moment design shall be taken at 19 feet below existing ground surface.

Helical piles bearing capacity is a proprietary product dependent on manufacturer shaft type, size, and steel strength as well as helix size, numbers, spacing, depth, soil profile and installation torque. Therefore, the helical pile specialty foundation contractors and his engineer shall submit signed and sealed shop drawings of the proposed helical piles to the building department. The above depths are minimum depth required or until torque design is achieved unless authorized by the geotechnical engineer. As the limestone surface is non-homogenous in composition and strength with varying sand pockets; variations in installed depths of helical and pin piles should be expected. Therefore, significantly longer piles may be needed to achieve torque capacity due to piles penetrating solution holes in the limestone formation. Predrilling or specialty cutting heads may be required to achieve design depths. All helical piles manufacturers and installers must be in compliance with acceptance criteria AC 358 to establish system capacities.

Lateral Load for a pile Top Deflection of ¼ inch. Lateral load capacities may be increased using battered piles. Batter angles can be used for the pile installation of up to 2 inches per foot (Horizontal, Vertical). However, care should be taken not to overlap adjacent piles. Lateral capacities of battered piles are based on batter angle used and vector sum analysis.

In case of existing structures in the vicinity of the pile driving operation, care shall be taken not to create excessive vibration. Vibration levels shall be monitored to verify compliance with county regulations. Steps must be taken by the contractor to prevent excessive vibrations in the event excessive vibrations are experienced during construction, alternative driving methods shall be implemented (ie: predrilling, jetting, hydraulic push, etc…).

750 WEST 84TH STREET, HIALEAH, FL 33014 PHONE (305) 828-7499 FAX (305) 828-9598 EMAIL:INFO@DYNATECHENGINEERING.COM

MIAMIBEACH
BUILDING DEPARTMENT

BR2106013
03/02/2022 12:02:41 PM

The minimum center to center of piles or adjacent piles shall be not less than two and a half the average diameter for round piles, but in no case less than 36 inches to avoid load capacity reduction caused by group effect. Piles shall be driven with a variation of not more than ¼" per foot from vertical, and within 3 inches of the specified plan location.

The installation of adjacent auger cast piles (located within 6 pile diameters o.c. of each other) on the same working day is not recommended. We recommend that adjacent auger cast piles not be installed until the initial grouted pile has set overnight, but no less than 12 hours.

The grout used in the pile installation shall develop a minimum compressive strength of 5000 PSI at 28 days. Large grout volumes, possibly twice (or more) of the theoretical pile volume, are expected for proper auger cast pile installation due to subsoil conditions. More so where former structures have been demolished and former piles removed causing additional underground cavities.

All pile reinforcing must be designed by the structural engineer to resist all axial, bending, & shear stresses, & shall be placed under the supervision of our Geotechnical Engineer to verify compliance with our recommendations. If the pile is not reinforced over the entire length, we recommend a minimum of a single #7 bar be placed the full length of the pile to verify pile continuity.
All work shall be performed in accordance with the applicable building code.

The following soil parameters shall be used for retaining wall designs:

- Soil unit weight moist: 115 pcf. Submerged: 53 pcf.
- Angle of internal friction: 30°
- Earth pressure coefficient Ka: 0.33; Kp: 3.0
- Angle of wall friction: 30° for steel piles, 20° for concrete or brick walls; 15° uncoated steel.

Any underground structures such as grease traps; septic systems, etc… must be supported on pile foundations, unless the deleterious material (ie: silt, muck, peat, etc…) is excavated in its entirety and replaced with compacted washed gravel such as pea rock or # 57 stone. Fasten utility lines to underside of structural slabs to limit settlements.

Excavations shall not extend within 1 foot of the angle of repose next to existing footings or structures, unless underpinned. All excavation shoring must be designed and inspected by a Florida licensed professional engineer. Excavation contractor must make provisions for hard excavation conditions.

All trenching work shall be in compliance with Florida Building Code, OSHA, & Trench Safety Act.

Provisions shall be made by the architect, engineer of record and contractor to address vibration / dynamic loading; differential settlements when tying in new to existing structures. Mixing of different foundations shall not be used unless provided with expansion joints to address differential settlements and vibration transfer.

Also note that as a common engineering practice for existing and new construction; outside ground surfaces must be sloped away from the structure as to avoid water accumulation and ponding. Rain gutters shall be installed and all rain water shall be discharged over splash guards a minimum of 5 feet away from building foundations. Verify all water, sewer, plumbing, sprinkler and drainage lines are properly functioning with no leaks in the vicinity of the foundations.

An arborist must be consulted prior to any land clearing to verify compliance with local codes.

Detailed settlement analysis was beyond the scope of this report. However, we have compared the field test data obtained in this exploration with our experience with structures similar to those proposed for this report. The estimated magnitude of these settlements is less than ½ inch differential and less than 1 inch total settlements. Due to the granular nature of the subsurface materials, the foundation settlements should occur as the loads are applied and should be virtually negligible by the end of the building shell completion.

If dynamic loading is proposed (ie: parking garage, etc…) this condition MUST be brought to our attention to re-evaluate the applicability of our recommendations.

Pursuant to the client's request; anscillary non-structural elements such as sidewalks, walkways, landscaping walls less than 3 feet, etc… may be designed for a shallow foundation system with a net static permissible soil bearing pressure not to exceed 1500 PSF. Please note however, that settlements, will occur in the future and will require maintenance.

Re: 28 Star Island Drive, Miami Beach, FL

This report was prepared in compliance with the 2020 Florida Building Code, 7th edition. Site elevations were not provided to us for the test locations. Depths reported on the field boring logs represent the depth below existing ground surface as they existed on the date of drilling. In the event of subsequent filling, excavations or site work, the reported depths must be adjusted to represent proper depths.

The boring log (s) attached present (s) a detailed description of the soils encountered at test location (s). The soil stratification shown on the boring log (s) is based on the examination of the recovered soil samples and interpretation of the driller's field log (s). It indicates only the approximate boundaries between soil types. The actual transitions between adjacent soil types may be gradual. Regardless of the thoroughness of a geotechnical exploration there is always the possibility that conditions may be different from those of the test locations; therefore, DYNATECH ENGINEERING CORP. does not guarantee any subsoil conditions between the bore test holes. In accepting and using this report the client understands and accepts that all data from the borings are strictly for foundation analysis only and are not to be used for excavation or back filling estimates and pricing. Owner and site contractor must familiarize themselves with site conditions prior to bidding. Client recognizes that actual conditions in areas not tested by DEC may differ from those anticipated in DEC's report. Client understands and accepts that this can significantly increase the cost of construction for its future projects. Client agrees that DEC shall not be responsible or liable for any variations in the actual conditions of areas not tested by DEC. This report is not a Phase I and/or Phase II Environmental Site Assessments. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval. The scope of services performed in the execution of this investigation may not be appropriate to satisfy the needs of other users, and use or re-use of this document or the findings, conclusions, or recommendations is at the risk of said user. Said user must contact DEC in writing to verify applicability of this report for their use. All work must be conducted under the supervision of our geotechnical engineer. The discovery of any site or subsurface conditions during construction which deviate from the information obtained from our subsoil investigation is always likely and should be reported to us for our evaluation. All work shall be conducted in compliance with the Florida Building Code FBC and OSHA workers protection rules and all applicable Federal, State, County and City rules and regulations. In the event, changes, challenges and other value engineering opportunities occur without our knowledge, our recommendations may become compromised and geotechnical related issues may be misconstrued. Therefore, all geotechnical work shall be performed under our supervision to verify compliance with the intent of our recommendations.

It has been a pleasure working with you and look forward to do so in the near future.

Sincerely yours,

Wissam

Notice & Certification

This application is hereby made to obtain a permit to do the work and installations as indicated. I certify that all work will be performed to meet the standards of all laws and construction regulations in this jurisdiction. I understand that a separate permit must be secured for Electrical, Elevator, Fire, Mechanical, Plumbing, Signs, Wells, Pools, Furnaces, Boilers, Heaters, Tanks, Air Conditioners, etc.

Owner's Affidavit: I certify that all the forgoing information is correct. Owner Certifies that the aforementioned Contractor has the authorization to perform the work as specified above.

Lessee's Affidavit: Lessee certifies that he has full consent and authorization from owner of subject property to perform the above-mentioned work and to hire above captioned contractor.

In addition to the requirements of this permit, there may be additional restrictions applicable to this property that may be found in the public records of this county, and there may be additional permits required from other governmental entities such as: the Environmental Division of Miami-Dade County; Permitting, Environment and Regulatory Affairs, Water & Sewer Department, Department of Environmental Protection, South Florida Water Management District, Miami-Dade County Impact Fee, water management districts, state agencies, and/or federal agencies.

Under penalties of perjury, I declare that I have read the foregoing application and that the facts stated in it are true. Any information found to be false may cause the revocation and/or denial of the permit and/or Certificate of Occupancy. A person who knowingly makes a false declaration is guilty of the crime of perjury by false written declaration, a felony of the third degree, punishable as provided in s. 775.082, s. 775.083, or s. 775.084.

OWNER'S AND QUALIFIER'S ELECTRONIC SUBMISSION STATEMENT: Under penalties of perjury, I declare that I have read the information contained in this permit application and the facts stated in it are true and correct.

- [ ] **Owner/Lessee for new permits** (Documentation establishing ownership may be requested).
- [ ] **Master Permit Contractor of Record** (For sub-permit / change of contractor).
- [ ] **TEMPORARY STRUCTURE PERMIT PACKAGE MUST BE SUBMITTED TWO (2) WEEKS IN ADVANCE. ***

WARNING TO OWNER: YOUR FAILURE TO RECORD A NOTICE OF COMMENCEMENT MAY RESULT IN YOUR PAYING TWICE FOR IMPROVEMENTS TO YOUR PROPERTY. A NOTICE OF COMMENCEMENT IS REQUIRED FOR ANY WORK WITH COST EXCEEDING $2,500.00.

Re: Response to Permit Review - DERM - Coastal

This memo serves to address the most recent plan review for DERM section comments.
Refer to clouded areas under delta 02.

1- A review of the subject site plans reveals new structures over tidal waters and work requiring a Class I permit that is depicted on plans as "rock seawall", "by others", "under separate permit", "future", or similar statement. The subject plans cannot be approved unless the required Class I permit has already been obtained for that work. Please accurately depict the seawall as per the existing conditions and delete any new structures and notations from the plans or obtain the required Class I permit prior to this approval. Our records identify that as of this date, Class I permit #CLI 2021-0659 has not been issued for the subject property.

Please review all sheets in all sets of plans and revise regarding the comments above, including but not limited to sheets C500 and contact the Coastal Resources Section at (305) 372-6575 or dermcr@miamidade.gov if you have any questions regarding their permitting procedures and requirements.
RESPONSE: DERM process number and Class 1 permit number have been added to the plans. Refer to sheet C-500 & L-300.

RE: 28 Star Island
Foundation Permit BR2106013

Below are our responses to your comments dated on 10/29/21:

Environmental Resources:

Comment 1. Please include a signed Construction Site Sediment and Erosion Control Affidavit and Notes with your plans. The affidavit can be found at https://www.miamibeachfl.gov/city-hall/building/forms under "Environmental Related Forms". The following sediment and erosion controls are required on all construction sites proposing land disturbing activities.

a. Temporary gravel construction entrance and exit
b. strom drain inlet protection. Every storm drain inlet receiving stormwater runoff from the site will be protected with at least one type of inlet protection, such as a gravel bag barrier, block and gravel filter, excavated drop inlet sediment trap, or filter fabric fence.
c. staked turbity barrier (silt fence)
d. floating turbidity barrier (as applicable for in-water work)

Response: Attached are the Sediment and Erosion Control Plans/Notes/Details (C500 and C600)

Sincerely,
OCEAN ENGINEERING, INC.

Re: Response to Permit Review - Planning

This memo serves to address the most recent plan review for Planning section comments.
Refer to clouded areas under delta 02.

1- Please label all areas encroaching on required side yards (including those in the south east portion of site) on site plan and understory level (Sheets G-002 and A-101).
RESPONSE: Areas encroaching within side setbacks have been labeled and dimensioned. The encroachment are permissible under Section 142-106(13), and include roof overhangs (which are less than 25% of the required side setback) and a walkway/ramp at the understory level. The ramp is flanked by a low retaining wall which does not exceed the height of the adjacent walkway.

Mrs. Jennifer Quiles
BRODSON CONSTRUCTION, INC.
120 NE 27th Street, Suite 100
Miami, FL 33137

Re: Proposed Renovation @
28 Star Island Drive
Miami Beach, FL 33139 (Addendum 1)

Dear Mrs. Quiles:

Pursuant to your request, DYNATECH ENGINEERING CORP. (DEC) completed a Subsoil Investigation on March 1, 2021 at the above referenced project. The purpose of our investigation was to help determine subsoil conditions relative to foundation design of the proposed structure.

A total of (2) standard penetration boring tests were performed according to ASTM-D 1586 down to an average depth of 40' below existing ground surface at the locations shown on the attached sketch.

The following graph was developed as a general condition below existing ground surface at the time of drilling for the subject site (Subsoil conditions are non-homogenous, refer to field boring logs for exact locations and soil description. Average depths are approximate and will vary in the field):

Average Depth From	To	Description
0'-0"	0'-6"	Topsoil and grass
0'-6"	2'-0"	Tan medium sand w/rock fragments
2'-0"	4'-0"	Gray sand w/construction debris
4'-0"	6'-0"	Tan silty sand w/rock fragments
6'-0"	11'-0"	Gray silty sand
11'-0"	24'-0"	Gray silt
24'-0"	32'-0"	White medium sand w/rock fragments
32'-0"	40'-0"	Tan sandy limerock

Groundwater was measured immediately at the completion of each boring and was found at an average depth of approximately 4' below existing ground surface at the time of drilling. This immediate depth to groundwater level should not be relied upon alone for project design considerations. Existing ground surface elevation was not provided to us at the time of drilling. Design engineers must verify existing ground elevations as well as FEMA Flood and County highest and lowest groundwater elevation for their design. Fluctuation in water level is anticipated due to seasonal variations and run off as well as varying ground elevations construction dewatering and pumping activities in the area, king tides, flash flooding, storm surge and global warming. Site contractor must familiarize himself with site conditions in the event groundwater controls and dewatering is needed during construction. Surface flooding may result under hurricane conditions and should be taken into consideration in the design of the project. The contractor shall monitor and make sure that groundwater levels on adjacent properties are not adversely impacted due to the contractors dewatering activities. Specialty groundwater and water proofing contractors shall be consulted for all work below the groundwater level. All dewatering volume & effluent discharge must meet local, State & Federal requirements.

Re: 28 Star Island Drive, Miami Beach, FL

Based on our understanding of the proposed structure and our field boring logs; deep foundation systems are needed to support the proposed **structures and slabs** without detrimental settlement.

Alternatives Pile Foundation	Minimum Pile length or refusal B.E.S.L.	Size	Pile Capacity in Tons Compression	Pile Capacity in Tons Tension	Allowable Lateral Capacity in Tons
Pin Piles / push piers *	38' BESL	3"Ø sch.80	5 Tons	1 Ton	N/A
Helical Piles *	38' BESL	3"Ø sch.80	12 Tons	6 Tons	N/A
Auger Cast Piles	38' BESL	12" Ø	25 Tons	12 Tons	1 Ton
Auger Cast Pile	38' BESL	14" Ø	35 Tons	15 Tons	2 Tons

B.E.S.L.: Below Existing Street Level.
*** Minimum depth or until torque is achieved.**

Pile lengths will vary (increase or decrease) depending on actual subsurface conditions. Existing land elevation was not provided to us at this time; the estimated pile length will depend on proposed surface elevations and grades. Pile length will need to be adjusted accordingly once final designs are complete. Predrilling, pre punch may be required due to hard rock. It is common to encounter soft, sand /silt pockets in rock formations. Any encountered soft sand pockets during pile installation must be drilled deeper to achieve capacity as directed on site by our geotechnical engineer.

For computer structural modeling of the building foundation system initial vertical spring constants of 500 Kpi for compression and 250 Kpi for tension may be used. The vertical spring constant values is the work pile load divided by estimated pile settlement and is based on our experience and review of available pile load tests data and settlement estimates in similar subsurface conditions and shall be refined as the structural model is developed. Point of fixity for moment design shall be taken at 19 feet below existing ground surface.

Helical piles bearing capacity is a proprietary product dependent on manufacturer shaft type, size, and steel strength as well as helix size, numbers, spacing, depth, soil profile and installation torque. Therefore, the helical pile specialty foundation contractors and his engineer shall submit signed and sealed shop drawings of the proposed helical piles to the building department. The above depths are minimum depth required or until torque design is achieved unless authorized by the geotechnical engineer. As the limestone surface is non-homogenous in composition and strength with varying sand pockets; variations in installed depths of helical and pin piles should be expected. Therefore, significantly longer piles may be needed to achieve torque capacity due to piles penetrating solution holes in the limestone formation. Predrilling or specialty cutting heads may be required to achieve design depths. All helical piles manufacturers and installers must be in compliance with acceptance criteria AC 358 to establish system capacities.

Lateral Load for a pile Top Deflection of ¼ inch. Lateral load capacities may be increased using battered piles. Batter angles can be used for the pile installation of up to 2 inches per foot (Horizontal, Vertical). However, care should be taken not to overlap adjacent piles. Lateral capacities of battered piles are based on batter angle used and vector sum analysis.

In case of existing structures in the vicinity of the pile driving operation, care shall be taken not to create excessive vibration. Vibration levels shall be monitored to verify compliance with county regulations. Steps must be taken by the contractor to prevent excessive vibrations in the event excessive vibrations are experienced during construction, alternative driving methods shall be implemented (ie: predrilling, jetting, hydraulic push, etc…).

The minimum center to center of piles or adjacent piles shall be not less than two and a half the average diameter for round piles, but in no case less than 36 inches to avoid load capacity reduction caused by group effect. Piles shall be driven with a variation of not more than ¼" per foot from vertical, and within 3 inches of the specified plan location.

The installation of adjacent auger cast piles (located within 6 pile diameters o.c. of each other) on the same working day is not recommended. We recommend that adjacent auger cast piles not be installed until the initial grouted pile has set overnight, but no less than 12 hours.

The grout used in the pile installation shall develop a minimum compressive strength of 5000 PSI at 28 days. Large grout volumes, possibly twice (or more) of the theoretical pile volume, are expected for proper auger cast pile installation due to subsoil conditions. More so where former structures have been demolished and former piles removed causing additional underground cavities.

All pile reinforcing must be designed by the structural engineer to resist all axial, bending, & shear stresses, & shall be placed under the supervision of our Geotechnical Engineer to verify compliance with our recommendations. If the pile is not reinforced over the entire length, we recommend a minimum of a single #7 bar be placed the full length of the pile to verify pile continuity.
All work shall be performed in accordance with the applicable building code.

The following soil parameters shall be used for retaining wall designs:

- Soil unit weight moist: 115 pcf. Submerged: 53 pcf.
- Angle of internal friction: 30°
- Earth pressure coefficient Ka: 0.33; Kp: 3.0
- Angle of wall friction: 30° for steel piles, 20° for concrete or brick walls; 15° uncoated steel.

Any underground structures such as grease traps; septic systems, etc… must be supported on pile foundations, unless the deleterious material (ie: silt, muck, peat, etc…) is excavated in its entirety and replaced with compacted washed gravel such as pea rock or # 57 stone. Fasten utility lines to underside of structural slabs to limit settlements.

Excavations shall not extend within 1 foot of the angle of repose next to existing footings or structures, unless underpinned. All excavation shoring must be designed and inspected by a Florida licensed professional engineer. Excavation contractor must make provisions for hard excavation conditions.

All trenching work shall be in compliance with Florida Building Code, OSHA, & Trench Safety Act.

Provisions shall be made by the architect, engineer of record and contractor to address vibration / dynamic loading; differential settlements when tying in new to existing structures. Mixing of different foundations shall not be used unless provided with expansion joints to address differential settlements and vibration transfer.

Also note that as a common engineering practice for existing and new construction; outside ground surfaces must be sloped away from the structure as to avoid water accumulation and ponding. Rain gutters shall be installed and all rain water shall be discharged over splash guards a minimum of 5 feet away from building foundations. Verify all water, sewer, plumbing, sprinkler and drainage lines are properly functioning with no leaks in the vicinity of the foundations.

An arborist must be consulted prior to any land clearing to verify compliance with local codes.

Detailed settlement analysis was beyond the scope of this report. However, we have compared the field test data obtained in this exploration with our experience with structures similar to those proposed for this report. The estimated magnitude of these settlements is less than ½ inch differential and less than 1 inch total settlements. Due to the granular nature of the subsurface materials, the foundation settlements should occur as the loads are applied and should be virtually negligible by the end of the building shell completion.

If dynamic loading is proposed (ie: parking garage, etc…) this condition MUST be brought to our attention to re-evaluate the applicability of our recommendations.

Pursuant to the client's request; anscillary non-structural elements such as sidewalks, walkways, landscaping walls less than 3 feet, etc… may be designed for a shallow foundation system with a net static permissible soil bearing pressure not to exceed 1500 PSF. Please note however, that settlements, will occur in the future and will require maintenance.

Re: 28 Star Island Drive, Miami Beach, FL

This report was prepared in compliance with the 2020 Florida Building Code, 7th edition. Site elevations were not provided to us for the test locations. Depths reported on the field boring logs represent the depth below existing ground surface as they existed on the date of drilling. In the event of subsequent filling, excavations or site work, the reported depths must be adjusted to represent proper depths.

The boring log (s) attached present (s) a detailed description of the soils encountered at test location (s). The soil stratification shown on the boring log (s) is based on the examination of the recovered soil samples and interpretation of the driller's field log (s). It indicates only the approximate boundaries between soil types. The actual transitions between adjacent soil types may be gradual. Regardless of the thoroughness of a geotechnical exploration there is always the possibility that conditions may be different from those of the test locations; therefore, DYNATECH ENGINEERING CORP. does not guarantee any subsoil conditions between the bore test holes. In accepting and using this report the client understands and accepts that all data from the borings are strictly for foundation analysis only and are not to be used for excavation or back filling estimates and pricing. Owner and site contractor must familiarize themselves with site conditions prior to bidding. Client recognizes that actual conditions in areas not tested by DEC may differ from those anticipated in DEC's report. Client understands and accepts that this can significantly increase the cost of construction for its future projects. Client agrees that DEC shall not be responsible or liable for any variations in the actual conditions of areas not tested by DEC. This report is not a Phase I and/or Phase II Environmental Site Assessments. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval. The scope of services performed in the execution of this investigation may not be appropriate to satisfy the needs of other users, and use or re-use of this document or the findings, conclusions, or recommendations is at the risk of said user. Said user must contact DEC in writing to verify applicability of this report for their use. All work must be conducted under the supervision of our geotechnical engineer. The discovery of any site or subsurface conditions during construction which deviate from the information obtained from our subsoil investigation is always likely and should be reported to us for our evaluation. All work shall be conducted in compliance with the Florida Building Code FBC and OSHA workers protection rules and all applicable Federal, State, County and City rules and regulations. In the event, changes, challenges and other value engineering opportunities occur without our knowledge, our recommendations may become compromised and geotechnical related issues may be misconstrued. Therefore, all geotechnical work shall be performed under our supervision to verify compliance with the intent of our recommendations.

It has been a pleasure working with you and look forward to do so in the near future.

Sincerely yours,

Wissam

GENERAL NOTES

Soil borings on unmarked vacant property should be considered preliminary with further boring(s) to be drilled after building pad(s) are staked out.

Soil borings on existing structures that are to be demolished should be considered preliminary and additional borings would need to be performed after the structure(s) has been demolished and proposed new building staked out.

As mutual protection to clients, the public and ourselves, all reports are submitted as confidential property of clients. Authorization for publication of statements, conclusions, extracts from or regarding our reports is reserved pending our written approval.

KEY CLASSIFICATION & SYMBOLS

CORRELATION OF PENETRATION RESISTANCE WITH RELATIVE DENSITY AND CONSISTENCY

	CONE PENETRATION TESTS ($Kg./Cm^3$)	STANDARD PENETRATION (BLOWS/Ft.)	RELATIVE DENSITY
SANDS	0-16	0-4	VERY LOOSE
	17-40	5-10	LOOSE
	41-80	11-20	FIRM
	81-120	21-30	VERY FIRM
	OVER 120	31-50	DENSE
SILTS & CLAY	0-3	0-2	VERY LOOSE
	4-9	3-4	SOFT
	10-17	5-8	FIRM
	18-31	9.15	STIFF
	32-60	16-30	VERY STIFF
	OVER 60	31-50	HARD

	PARTICLE SIZE
BOULDERS	>12 in.
COBBLE	3 in. to 1 in.
GRAVEL	4.76 mm to 3 in.
SAND	0.07 mm to 4.67 mm
SILT	0.005 mm to 0.074 mm
CLAY	<0.005 mm

	MODIFIERS
5%-10%	Slightly Silty or Clayey
10%-30%	Silty or Clayey
30%-50%	Very Silty or Very Clayey
0% - 5%	Slight Trace
6%-10%	Trace
11%-20%	Little
21%-35%	Some
>35%	And

	ROCK HARDNESS DESCRIPTION
Soft	Rock core. Crumbles when handled
Medium	Can break with your hands.
Moderate Hard	Thin edges or rock core. Can be broken with fingers.
Hard	Thin edges or rock core. Can be broken with fingers.
Very Hard	Rock core. Rings when struck with hammer (cherts).

2 Properties

This chapter provides property information for materials, frame sections, shell sections, and links.

2.1 Materials

Table 2.1 - Material Properties - General

Material	Type	SymType	Grade	Color	Notes
10000Psi	Concrete	Isotropic	Unknown	Magenta	
11000Psi	Concrete	Isotropic	Unknown	Red	
12000psi	Concrete	Isotropic	Unknown	Green	
3000 Psi	Concrete	Isotropic	Unknown	Red	
4000Psi	Concrete	Isotropic	Unknown	Blue	
5000Psi	Concrete	Isotropic	Unknown	Cyan	
6000Psi	Concrete	Isotropic	Unknown	Yellow	
7000Psi	Concrete	Isotropic	Unknown	Cyan	
8000Psi	Concrete	Isotropic	Unknown	Green	
9000Psi	Concrete	Isotropic	Unknown	Gray8Dark	
A416Gr270	Tendon	Uniaxial	Unknown	Gray8Dark	
A615Gr60	Rebar	Uniaxial	Unknown	Magenta	
A992Fy50	Steel	Isotropic	Unknown	Blue	
Masonrry	Masonry	Isotropic	fcm 2000 psi	Cyan	

2.2 Frame Sections

Table 2.2 - Frame Section Property Definitions - Summary (Part 1 of 4)

ASCE 7-16 Auto Wind Load Calculation

This calculation presents the automatically generated lateral wind loads for load pattern Wind according to ASCE 7-16, as calculated by ETABS.

Exposure Parameters

Exposure From = Diaphragms

Exposure Category = D

Wind Direction = 0 degrees

Basic Wind Speed, V [ASCE 26.5.1] $V = 175\ mph$

Windward Coefficient, $C_{p,wind}$ [ASCE 27.4.1] $C_{p,wind} = Varies$

Leeward Coefficient, $C_{p,lee}$ [ASCE 27.4.1] $C_{p,lee} = Varies$

Wind Case = All Cases

Top Story = Elevator Overrun

Bottom Story = Understory

Include Parapet = No

Factors and Coefficients

Gradient Height, z_g [ASCE Table 26.9-1] $z_g = 700$

Emperical Exponent, α [ASCE Table 26.9-1] $\alpha = 11.5$

Velocity Pressure Exposure Coefficient, K_z; [ASCE Table 27.3-1]

$$K_z = 2.01 \left(\frac{z}{z_g}\right)^{\frac{2}{\alpha}} \quad for\ 15ft \le z \le z_g$$

$$K_z = 2.01 \left(\frac{15}{z_g}\right)^{\frac{2}{\alpha}} \quad for\ z < 15ft$$

Topographical Factor, K_{zt} [ASCE 26.8.2] $K_{zt} = 1$

Directionality Factor, K_d [ASCE 26.6] $K_d = 0.85$

Gust Effect Factor, G [ASCE 26.9] $G = 0.95$

Lateral Loading

Velocity Pressure, q_z [ASCE 27.3.2 Eq. 27.3-1]

$$q_z = 0.00256\ K_z K_{zt} K_d V^2$$

Design Wind Pressure, p [ASCE 27.4.2 Eq. 27.4-2]

$$p = qG\ C_{p,wind} + q_h\ (G\ C_{p,lee})$$
