Kimley»Horn

MEMORANDUM

To: Otniel Rodriguez, E.I.
City of Miami Beach

From: Adrian K. Dabkowski, P.E., PTOE

Date: May 3, 2023

Subject: Lincoln Road 100 Block Streetscape and Sagamore Hotel
Response to Traffic Impact Analysis Comments

We have received comments provided by the City of Miami Beach's Transportation Department. We offer the following responses to the comments:

1. Page 22**,** Valet Operations Analysis – Please state the source or reasoning for the assumption that 10% of the Sagamore Hotel redevelopment generated trips are resident guests.

   Response: To remain consistent with the approved methodology, the analysis included 10 percent (10%) of trips associated with the residential redevelopment as resident guests. Please refer to the approved methodology in Appendix B of the response Attachment A-A.

2. Page 23, Valet Operations Analysis – Valet operations should be analyzing the midday peak and PM peak hours instead of the AM peak hour. Based on the SYNCHRO analysis, the control delay for these times are more than 1.5 minutes than the assumed 1.0-minute control delay.

   Response: The Sagamore residential guest porte-cochere was analyzed for the highest trip generation peak hour, the P.M. peak hour, consistent with the approved methodology. Additionally, the Ritz Carlton Valet was analyzed for the peak hotel valet times, Thursday 12 P.M. to 2 P.M. and Saturday 4:30 to 6:30 P.M. consistent with the approved methodology. Please refer to the approved methodology in Appendix B of Attachment A-A.

   Note that delay experienced by the WBR or SBL movements at the signalized intersection of Lincoln Road and Collis Avenue/A1A are expected to be at most 64.9 seconds under future total conditions with signal optimization. However, in order to facilitate the review process and provide a conservative analysis, the valet analysis was updated for the 1.5-minute control delay. Based on the update processing time, the valet analysis results do not change and one (1) valet attendant is required. The updated valet analysis is included as part of the updated traffic study in Attachment A-A.

3. Page 23, Valet Operations Analysis – Please justify the rationale or source for using the increase factor of 1.136 for the maximum queue observed and for the Valet attendants required. The queuing is typically non-linear and increases with much higher rate than the increase in the hotel rooms as part of the Ritz Carlton Porte-Cochere queuing analysis (Appendix J).

   Response: Consistent with the approved methodology, maximum queues were factored proportionally to account for the Sagamore Hotel valet traffic that will use the Ritz-Carlton

porte-cochere. Furthermore, if additional valet attendants are required, they will be provided to ensure that that the valet queue does not extend into public right-of-way. This is a typical condition of approval by the City of Miami Beach. Please refer to the approved methodology in Appendix B of the response Attachment A-A.

4. Page 26, Pedestrian Crossing Evaluation – Please provide the source or reasoning for the assumption that 50% of the non-Ritz Carlton pedestrian traffic will be reassigned to the south sidewalk. Did this reassignment consider the growth in proportion of pedestrians coming from north of Lincoln Road, south of Lincoln Road, and west of A1A/Collins Ave? Is any additional signage being provided along the south sidewalk noting that pedestrians should utilize this side of the road to access the beach?

   Response: Pedestrian volumes are expected to be reassigned to the south side of Lincoln Road as a 15-foot-wide art walk is proposed as part of this project, which is designed to align with the Beach Walk entry that will direct pedestrians to access the beach from the newly renovated street end. The volumes were grown for future conditions, consistent with the approved methodology.

   Note that, even if pedestrians are not diverted they will not conflict with loading truck maneuvers as all loading maneuvers will be internalized. Currently trucks back-in and conflict with pedestrians crossing.

   Additionally, "vehicles crossing sidewalk" signs on either side of the Ritz-Carlton loading/garage driveway could be provided along the sidewalk, if requested by the City of Miami Beach.

5. Page 28, Transportation Demand Management Strategies – Please confirm that 129 bicycle parking spaces (bike racks and lockers) are being proposed?

   Response: Confirmed.

6. Page 29, Parking Evaluation – With the relocation of the freight loading space, 1 emergency/city vehicle space is being removed but is not being relocated. Where do you anticipate this emergency/city vehicle to park after the 100 Block streetscape project is incorporated?

   Response: Please note that the one (1) emergency/city vehicle space will be removed. Coordination efforts with the Miami Beach Parking Department are ongoing.

7. Page 29, Parking Evaluation – Due to substantial number of pedestrians crossing, recommend providing additional signage/DMS for the loading vehicles to yield to the pedestrians due to enlarged existing driveway being proposed?

   Response: Implementing signage directing loading vehicles to yield to pedestrians will likely create safety concerns as typical traffic operations are that pedestrians yield to vehicles entering a driveway and vehicles at a stop-controlled driveway approach yield to pedestrians in the crosswalk. Further note, that proposed improvements will allow trucks direct, head-in access to the loading area to perform loading maneuvers internally to the site and eliminate the current back-in maneuvers which conflict with pedestrians.

   Additionally, the proposed entrance to the beach walk is designed in a manner to direct pedestrians to the art walk on the south side of Lincoln Road and therefore the number of pedestrians crossing the loading area driveway is expected to be reduced.

Finally, "vehicles crossing sidewalk" signs on either side of the driveway along the sidewalk alerting pedestrians could be provided, if requested by the City of Miami Beach.

8. Page 29, Parking Evaluation – Based on our previous Comment #6 from the Traffic Impact Analysis Methodology, "Please confirm no loss of on-street parking along both sides of Lincoln Road due to the proposed lanes in the westbound direction of Lincoln Road."

   Four (4) on-street parking spaces including one emergency/city vehicle space, two taxi/cab spaces, and four motorcycle spaces are being lost due to the project based on the Parking Evaluation section.

   Response: As documented in the Parking Evaluation section of the submitted Traffic Impact Analysis, parking spaces along the north and south sides of Lincoln Road will be removed as part of the 100 Block Streetscape project. Please note that coordination efforts with the Miami Beach Parking Department are ongoing.

9. Appendix L, Parking Evaluation – Based on Appendix L, the existing parking spaces are reduced from 247 to 236, please confirm the loss of 11 total parking spaces and how we are addressing them.

   Response: As noted in Appendix L, 189 parking spaces are required by code and 236 spaces are provided. Therefore, the project exceeds the parking requirements.

10. General, Please provide SYNCHRO files for review.

    Response: Synchro files are provided as an attachment in the email. Note that a SimTraffic simulation was not part of the approved methodology nor a requirement of the City of Miami Beach Code. Therefore, Synchro files were not setup or calibrated for SimTraffic simulation.

11. General, Please include SYNCHRO analysis at the Ritz-Carlton driveway/Lincoln Road for all the Build analysis.

    Response: Please note that this intersection was not included as part of the approved methodology. Furthermore, as the east and westbound volumes on Lincoln Road east of Collins Avenue are expected to be in the range of 180 to 250 peak hour trips, significantly less than 800 vehicles per direction, further analysis is not typical.

12. Page 2, Project Location – Please include study area intersection and committed developments, if any, on the Location Map.

    Response: Comment noted. Figure 1 has been updated to include the study area intersection. Please refer to the updated traffic impact analysis contained in response Attachment A-A.

13. Page 3, Existing Traffic – Did the 72-hour counts also determine the peak periods for pedestrians? How were the pedestrian peak hours determined so that counts could be taken?

    Response: The 72-hour counts were continuous roadway counts and did not include pedestrians. Traffic analyses are typically prepared for the peak vehicular volumes and

pedestrian volumes during those peak periods are analyzed. This is necessary when intersection capacities are analyzed for improved roadway configurations, as this study performs. Note that this is consistent with the approved methodology.

14. Page 7, Future Traffic Volumes – Did the Future Background Growth take committed developments, if any, into consideration within the study area.

    Response: No committed developments were identified as part of the City's review and approval of the methodology. Note that the 100 Block Streetscape project was included as a committed development as part of the Lincoln Road Pedestrian Mall Extension.

15. Page 7, Future Traffic Volumes – Please mention the version of SERPM used.

    Response: As provided in background growth rate section of the submitted traffic impact analysis, SERPM model 8.512 is used.

16. Page 14, Figure 5 – Entering trips do not add up to 18. Based on Figure 8, the SB Left Turn should be 10.

    Response: Note that entering trips include trips accessing the Ritz-Carlton porte-cochere and parking garage and the Sagamore porte-cochere. As indicated in Figure 5, 97 percent (97%) of trips entered Lincoln Road directly, while 3 percent (3%) of entering trips continued north on Collins Avenue/A1A to the Sagamore porte-cochere. Note that non-rideshare vehicles utilizing the Sagamore porte-cochere will be valeted as presented in Figure 6. Therefore, the southbound left turn volumes at the intersection of Collins Avenue/SR A1A and Lincoln Road in Figure 8 are a sum of the project trip assignment and valet trip assignment volumes. The sum of the project trip assignment and valet trip assignment leads to a total of SBL 10 trips which is accurately displayed in the future total condition.

17. Page 20, Table 3 – Based on the Synchro reports in Appendix I, the Thursday P.M. Peak Hour WB approach LOS is "D".

    Response: The Thursday P.M. Peak Hour WB approach has been revised in the updated traffic study in Attachment A-A to reflect the Synchro results provided in Appendix I of the submitted traffic impact analysis.

We trust that this response adequately addresses the comment provided. Please contact us should you have any questions.

Update May 2023
March 2023
143584000

EXECUTIVE SUMMARY

Sobe Sky Development, LLC is proposing a streetscape project for Lincoln Road and to redevelop the Sagamore Hotel. The streetscape project is bounded by Collins Avenue/SR A1A to the west and the public beach access/Ritz Carlton Hotel loading dock and parking garage access to the east, referred to as the 100 Block, in Miami Beach, Florida. Lincoln Road, east of Collins Avenue/SR A1A consists of one (1) 20-foot lane in each direction (wide enough to accommodate two [2] lanes but not designated as such), on-street parking on the north and south sides of the road, and a curbed 9.5-foot median. Lincoln Road terminates to the east at the public beach access in a cul-de-sac street-end with a curbed median island. The proposed project examines the appropriate laneage for the roadway configuration and provides for a wider pedestrian sidewalk along the south side of Lincoln Road. The streetscape project will also include reconfiguring the Ritz Carlton porte-cochere.

Additionally, the existing 93-room Sagamore Hotel (1671 Collins Avenue) is proposed to be redeveloped. The redevelopment includes a 51-room hotel and 30 mid-rise multifamily residential units. Trip generation for the proposed redevelopment was calculated using rates contained in the Institute of Transportation Engineers' (ITE's) *Trip Generation Manual*, 11th Edition. The project is expected to result in a reduction of seven (7) net new weekday A.M. peak hour trips and a reduction of ten (10) net new weekday P.M. peak hour trips.

The results of the intersection capacity analysis indicate that the study intersection is expected to operate at adopted level of service (LOS) or better during the Thursday mid-day peak hour, Thursday P.M. peak hour, and Friday P.M. peak hour under all analysis scenarios with the exception of the eastbound approach which operates at LOS F during the Friday P.M. peak hour under all analysis scenarios and the westbound approach which operates at LOS F during the Friday P.M. peak hour under future total conditions. The streetscape project proposes to improve the westbound approach at the intersection of Collins Avenue/A1A and Lincoln Road from one (1) shared left-turn/through/right-turn lane to one (1) exclusive left-turn lane and one (1) shared through/right-turn lane. With the proposed improvements and signal timing optimization, all approaches are expected to operate at adopted LOS or better during the Thursday mid-day peak hour, Thursday P.M. peak hour, and Friday P.M. peak hour under future total conditions, with the exception of the eastbound approach which operates at LOS F during the Friday P.M. peak hour under all analysis scenarios.

The results of the weekday A.M. and P.M. peak hours valet operations analysis demonstrate that one (1) valet attendant would be required to accommodate vehicle drop-off/pick-up demand at the

Sagamore Hotel porte-cochere. Furthermore, the seven (7) vehicles of storage capacity for the reconfigured Ritz Carlton porte-cochere is expected to be sufficient and provide enough storage capacity for the future demand of six (6) vehicles of stacking.

The maneuverability analysis determined that the loading vehicles and the City of Miami Beach emergency/fire truck are expected to be able to ingress, egress, and travel within Lincoln Road and the Ritz Carlton loading areas without conflicting with oncoming traffic. Additionally, loading vehicles will be able to maneuver into loading spaces within the loading area and will not need to reverse (back-in) into the site from the street as they do under existing conditions. As a result, loading vehicles are not expected to reverse through the pedestrian crossing area at the loading driveway, and will be able to enter the site head-on. This allows for greater visibility of pedestrians within the crosswalk and improved safety.

Transportation Demand Management (TDM) strategies are proposed to reduce the impacts of the project traffic on the surrounding roadway network City of Miami Beach provide public transit in close proximity to the project site. In addition, other measures are proposed to encourage people to use public transportation, use bicycles and walk, and find alternatives to the typical workday hours. The applicant proposes the following TDMs:

- Secure bicycle parking spaces (bike racks and lockers)
- Improved and enhanced (wide) sidewalks around the site
- Elevators that can accommodate bikes
- Lockers for bicyclists to store a change of clothes will be provided on-site
- Shower facility for bicyclists will be provided on-site

The required parking for the site, based on the City of Miami Beach Code of Ordinances, is 189 parking spaces. As part of the proposed redevelopment, 238 parking spaces will be provided with two (2) parking spaces provided on-street and 236 parking spaces provided on-site. Additionally, 129 bicycle spaces will be provided. As part of the 100 Block streetscape project, the freight loading zone, two (2) taxi/cab spots, and four (4) motorcycle pay-to-park spots along the south side of Lincoln Road are proposed to be removed. The freight loading zone is proposed to be relocated to the north side of Lincoln Road. Note that with the relocation of the freight loading, four (4) parking spaces will be removed, including one (1) emergency/city vehicle space and three (3) pay-to-park spaces.

INTRODUCTION

Sobe Sky Development, LLC is proposing a streetscape project for Lincoln Road and to redevelop the Sagamore Hotel. The streetscape project is bounded by Collins Avenue/SR A1A to the west and the public beach access/Ritz Carlton Hotel loading dock and parking garage access to the east, referred to as the 100 Block, in Miami Beach, Florida. Lincoln Road, east of Collins Avenue/SR A1A consists of one (1) 20-foot lane in each direction (wide enough to accommodate two [2] lanes but not designated as such), on-street parking on the north and south sides of the road, and a curbed 9.5-foot median. Lincoln Road terminates to the east at the public beach access in a cul-de-sac street-end with a curbed median island. The proposed project examines the appropriate laneage for the roadway configuration to provide for a wider pedestrian sidewalk along the south side of Lincoln Road. The streetscape project will also include reconfiguring the Ritz Carlton porte-cochere.

Additionally, the existing 93-room Sagamore Hotel (1671 Collins Avenue) is proposed to be redeveloped. The redevelopment includes a 51-room hotel and 30 mid-rise multifamily residential units. Currently, access to the Sagamore Hotel is provided by a porte-cochere on Collins Avenue north of Lincoln Road. The redevelopment will relocate the Sagamore Hotel access to the Ritz Carlton Hotel porte-cochere. Sagamore residents will self-park within the Ritz Carlton garage located on Lincoln Road. Sagamore resident guests will use the existing Sagamore porte-cochere on Collins Avenue to valet their vehicles or for rideshare drop-off/pick-up. The project is expected to be completed and opened by year 2025. A project location map is provided as Figure 1. A conceptual site plan is provided in Appendix A.

Kimley-Horn and Associates, Inc. has completed this traffic impact analysis for submittal to the City of Miami Beach. The purpose of the study is to assess the project's impact on the surrounding roadway network. The study's methodology is consistent with the requirements of the City of Miami Beach. Methodology correspondence detailing the traffic study requirements is included in Appendix B.

Project Location Map
Lincoln Road 100 Block Streetscape and Sagamore Hotel Redevelopment
Miami Beach, Florida

EXISTING TRAFFIC

In order to determine the peak traffic periods for analysis, 72-hour continuous counts were collected at the following two (2) locations from Thursday, June 16, 2022, through Saturday, June 18, 2022, and evaluated:

- Collins Avenue/SR A1A, north of Lincoln Road
- Lincoln Road, east of Collins Avenue/SR A1A

Based on the peak periods observed, turning movement counts (TMC's) were collected during peak conditions on Friday, January 13, 2023, from 3:30 P.M. to 5:30 P.M. and on Thursday, March 2, 2023, from 10:30 A.M. to 1:30 P.M. and from 2:30 P.M. to 6:30 P.M. to capture peak traffic volumes at the intersections of Lincoln Road and Collins Avenue/SR A1A.

Additionally, to capture peak pedestrian traffic volumes at the Ritz Carlton Porte-Cochere Exit Driveway and Ritz Carlton Loading Driveway, turning movement counts were collected during peak conditions on Thursday, July 21, 2022, from 10:30 A.M. to 1:30 P.M. and from 2:30 P.M. to 6:30 P.M. and on Friday, July 22, 2022, from 2:30 P.M. to 5:30 P.M.

All traffic volumes were collected in 15-minute intervals and the peak hour was determined for each intersection. Turning movement counts also included pedestrian and bicycle data. The appropriate Florida Department of Transportation (FDOT) peak season conversion factor (PSCF) of 1.06 was applied to the traffic data collected on July 21, 2022 to July 22, 2022, and 1.04 was applied to the traffic data collected on January 13, 2023. Note that the appropriate FDOT PSCF was 0.99 for the traffic data collected on March 2, 2023. However, to provide for a conservative analysis, a peak season conversion factor of 1.00 was applied to the traffic data where the identified PSCF was less than 1.00.

The 72-hour counts, turning movement counts, FDOT peak season category reports, and signal timing data are included in Appendix C. Figure 2 presents the existing turning movement volumes at the study intersection during the Thursday mid-day, Thursday P.M., and Friday P.M. peak hours.

Lincoln Road East
Miami Beach, Florida

PROGRAMMED TRANSPORTATION IMPROVEMENTS

Local transportation plans were reviewed in order to gather information about planned and programmed transportation improvements in the study area. The purpose of the plan review is to identify improvements for consideration in the analysis. Detailed plans can be found in Appendix D. The following transportation plans were examined:

- City of Miami Beach Transportation Master Plan
- Miami-Dade Transportation Planning Organization's (TPO) Transportation Improvement Program (TIP)
- Florida Department of Transportation's (FDOT's) Five-Year Work Program

Relevant information from these plans is summarized below.

CITY OF MIAMI BEACH TRANSPORTATION MASTER PLAN

The most recent City of Miami Beach Transportation Master Plan was reviewed to identify planned roadway improvements in the study area. Currently, planned studies and/or projects include the following:

- 16th Street bicycle facilities improvements from Bay Road to Collins Avenue.
- 17th Street evaluation of exclusive transit and protected/buffered bicycle lanes from Washington Avenue to Collins Avenue.
- Collins Avenue/A1A evaluation of exclusive transit and protected/buffered bicycle lanes from 17th Street to 44th Street.
- Lincoln Road shared spaces from Washington Avenue to Collins Avenue/A1A (Various multi-modal accommodations).
- Lincoln Lane North Bicycle Connection/Neighborhood Greenway from Alton Road to Washington Avenue.
- Collins Avenue/A1A protected/buffered bicycle lanes and enhanced crosswalks from South Pointe Drive to 17th Street.
- 15th Street Neighborhood Greenway (Bicycle boulevard markers and enhanced crosswalks) from Washington Avenue to West Avenue.

- Drexel Avenue Neighborhood Greenway (Bicycle boulevard markers and enhanced crosswalks) from Espanola Way to 17th Street.

MIAMI-DADE TPO TRANSPORTATION IMPROVEMENT PROGRAM

The Miami-Dade Transportation Improvement Program (TIP) specifies programmed improvements to be implemented within Miami-Dade County over the next five (5) years. The most recent TIP is for fiscal years 2023 to 2027. Improvements identified in the TIP are characterized as Intermodal, Highway, Transit, Aviation, Seaport, and Non-Motorized. Based on the review of the Miami-Dade TPO TIP, the TPO has developed the Strategic Miami Area Rapid Transit (SMART) Plan that provides recommendations for six (6) rapid transit corridors, including the Beach Corridor which extends from the existing Downtown Metromover Omni station along MacArthur Causeway to 5th Street near Washington Avenue via an elevated rubber-tire transit vehicle to be implemented by 2026. Bus-only lanes along Washington Avenue are proposed as part of TPO Resolution #03-2020 for the SMART Plan.

The Miami-Dade TPO is also developing a Transit Oriented Development (TOD) Master Plan for the Beach Corridor. This master plan is scheduled to be completed by 2024.

FDOT'S WORK PROGRAM

FDOT's Five Year Work Program specifies state regulated roadway improvements to be implemented over the next five (5) years (2023-2027). Based on the review of FDOT's Work Program, bicycle lane and sidewalk improvements will be implemented along 17th Street from West Avenue to the Beach Walk by the City of Miami Beach.

FUTURE TRAFFIC VOLUMES

Future background traffic conditions are defined as expected traffic conditions on the roadway network in the year 2025 without the completion of the proposed redevelopment. Future background traffic volumes used in the analysis are the sum of the existing traffic and additional traffic generated by growth in the study area. Refer to Figure 3 for the future background 2025 peak hour traffic volumes.

BACKGROUND AREA GROWTH

Traffic growth on the transportation network was determined based upon (a) historical growth trends at nearby FDOT traffic count stations and (b) traffic volume comparisons from the year 2015 and 2045 Florida Standard Urban Transportation Model Structure (FSUTMS) - Southeast Florida Regional Planning Model (SERPM). FDOT count stations referenced in this analysis include:

- FDOT count station no. 5159 located on SR A1A/Collins Avenue, north of 5th Street
- FDOT count station no. 5170 located on SR A1A/Collins Avenue, north of 21st Street
- FDOT count station no. 8414 located on Washington Avenue, north of 12th Street
- FDOT count station no. 8531 located on 17th Street, east of Meridian Avenue
- FDOT count station no. 8567 located on 16th Street, east of Meridian Avenue

The historic growth rate analysis, based on FDOT count stations, examined linear, exponential, and decaying exponential growth rates for the most recent five (5) and 10-year periods. The linear growth trend yielded an average growth rate of negative 2.24 percent (-1.59%) over the most recent five (5) year period and negative 0.55 percent (-0.55%) over the most recent ten (10) year period. The exponential growth trend yielded a growth rate of negative 2.85 percent (-2.85%) over the most recent five (5) year period and negative 0.57 percent (-0.57%) over the most recent ten (10) year period. The decaying exponential growth trend yielded a growth rate of negative 2.29 percent (-2.29%) over the most recent five (5) year period and negative 0.20 percent (-0.20%) over the most recent ten (10) year period.

Based on the forecasted volumes obtained from the 2015 and 2045 FSUTMS SERPM 8.521, an annual growth rate of 0.36 percent (0.36%) in the vicinity of the redevelopment was calculated.

To provide a conservative analysis, a minimum growth rate of 0.50 percent (0.50%) was applied annually to the existing traffic volumes to establish future (2025) background conditions. Detailed growth rate calculations are included in Appendix E.

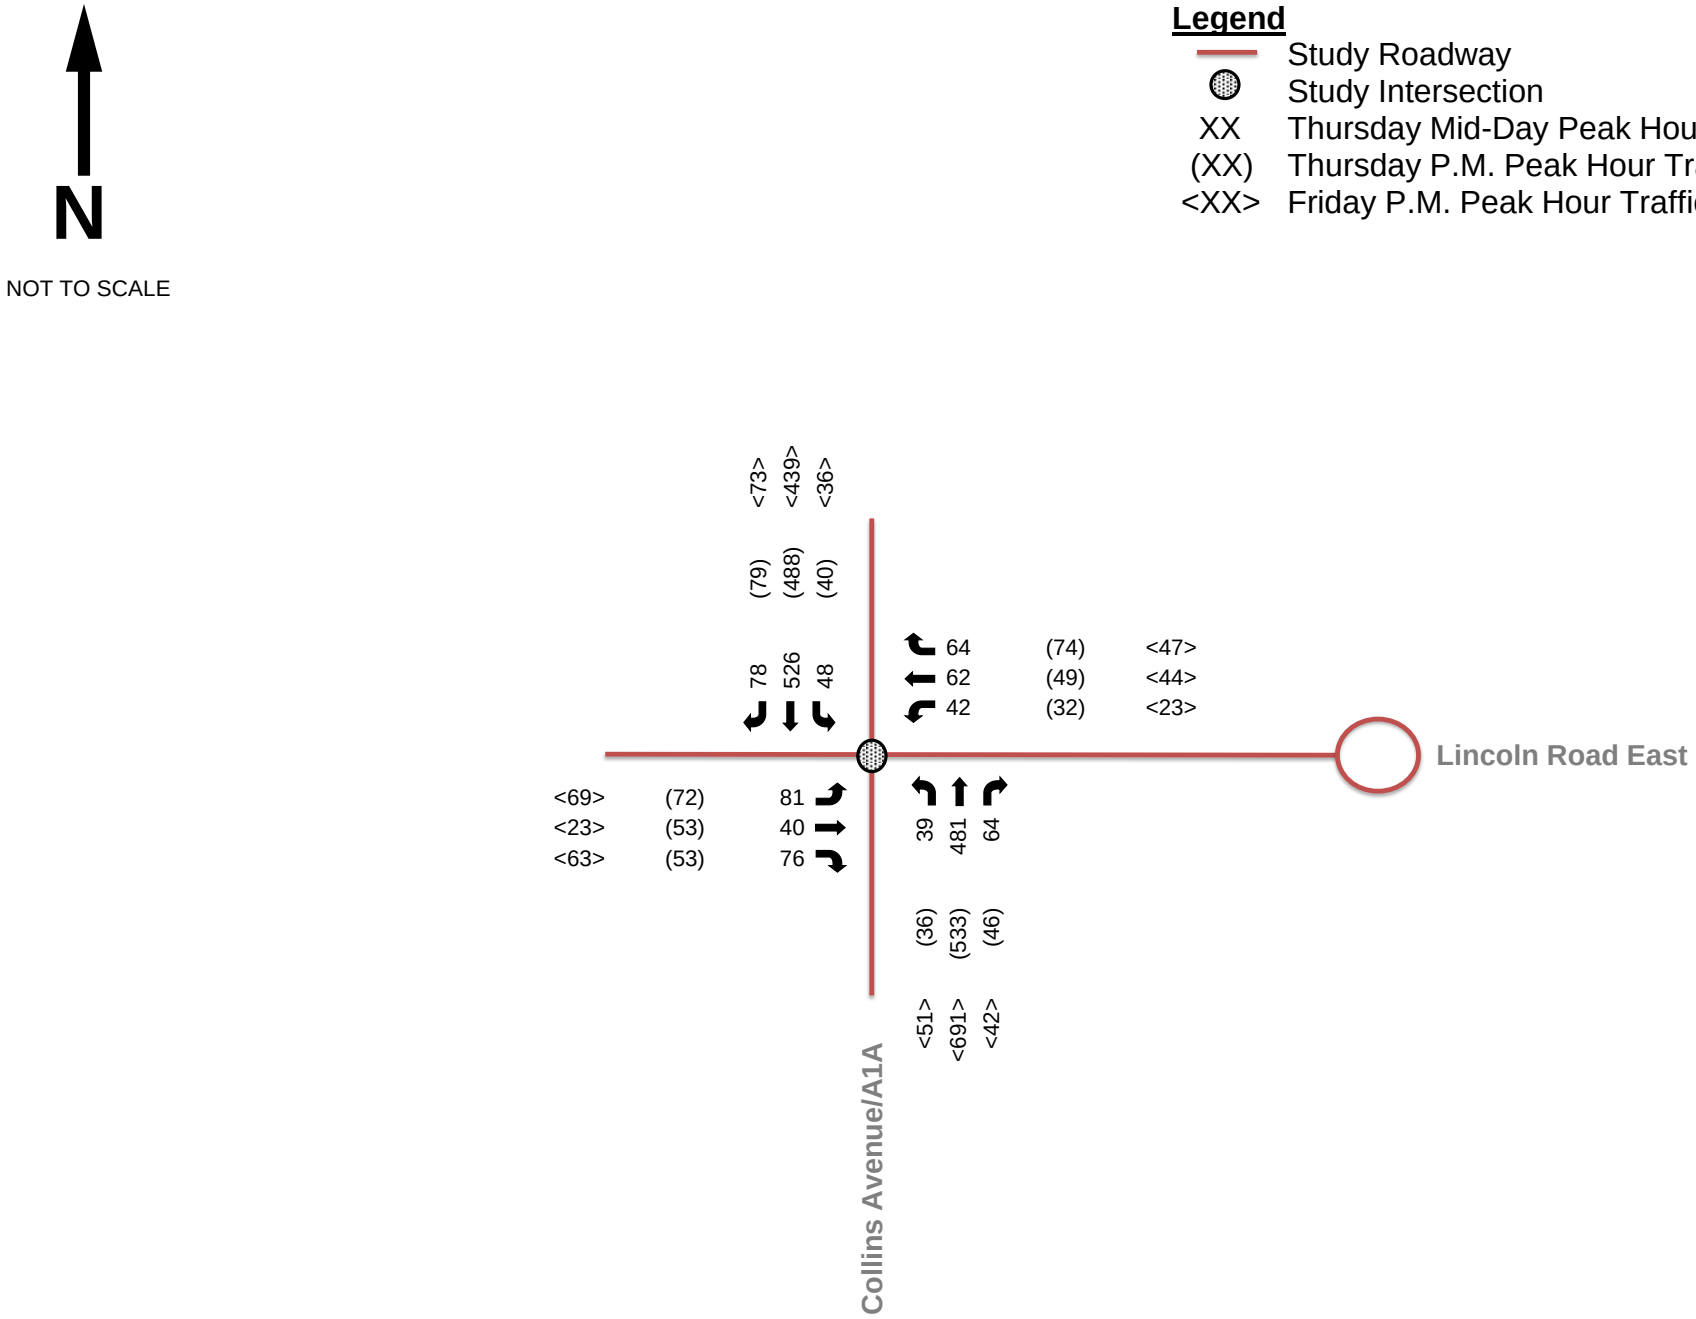

Figure 3
Future Background Peak Hour Traffic
Lincoln Road East
Miami Beach, Florida

© 2023

PROJECT TRAFFIC

Project traffic used in this analysis is defined as the vehicle trips expected to be generated by the project and the distribution and assignment of that traffic over the study roadway network.

EXISTING AND PROPOSED LAND USE

The site proposed for redevelopment is currently occupied by a 93-room hotel. The proposed redevelopment consists of a 51-room hotel and 30 mid-rise multifamily residential units. The project is expected to be completed and opened by year 2025.

PROJECT ACCESS

Access to the Ritz Carlton Hotel is provided via one (1) porte-cochere at the entrance of the Ritz Carlton Hotel and one (1) ingress/egress driveway to the loading area and parking garage. Access to the Sagamore development is provided via one (1) right-in/left-in entering driveway and one (1) right-out/left-out exiting driveway along Collins Avenue/SR A1A, north of Lincoln Road.

TRIP GENERATION

Trip generation calculations for the proposed project were performed using rates contained in ITE *Trip Generation Manual*, 11th Edition. The trip generation for the proposed land uses was determined using ITE Land Use Code LUC 310 (Hotel) and LUC 221 (Multifamily Housing [Mid- Rise]). Project trips were estimated for the weekday A.M. peak hour and P.M. peak hour.

MULTIMODAL REDUCTION

A multimodal (public transit, bicycle, and pedestrian) factor based on US Census *Means of Transportation to Work* data was reviewed for the census tract in which the redevelopment is located. A multimodal factor of 29.3 percent (29.3%) was determined for the proposed redevelopment. Please note that based on input from the City and to provide a conservative analysis a multimodal factor of 20.0 percent (20.0%) was applied to the project traffic to account for the urban environment in which the project site is located. It is expected that a portion of residents, guests, and employees will choose to walk, bike, or use public transit to and from the proposed redevelopment. Detailed census information is provided in Appendix F.

NET NEW PROJECT TRIPS

The net new project trips represent the additional vehicles on the roadway network. As shown in Table 1, the project is expected to result in a reduction of 7 net new weekday A.M. peak hour

vehicular trips and a reduction of 10 net new weekday P.M. peak hour trips. Detailed calculations are contained in Appendix F.

Table 1: Trip Generation				
A.M. Peak Hour (P.M. Peak Hour)				
Future Land Use (ITE Code)	**Scale**	**Net New External Trips**	**Entering Trips**	**Exiting Trips**
Existing Development				
Hotel (310)	93 rooms	34 (44)	19 (22)	15 (22)
Proposed Redevelopment				
Hotel (310)	51 rooms	18 (24)	10 (12)	8 (12)
Multifamily Housing (Mid-Rise) (221)	30 dwelling units	9 (10)	2 (6)	7 (4)
	Subtotal	27 (34)	12 (18)	15 (16)
Net New Vehicle Trips				
Net New Vehicle Trips		**-7 (-10)**	**-7 (-4)**	**0 (-6)**

Although the redevelopment of the Sagamore Hotel is expected to result in a reduction of trips, access to the site for valeting hotel guests, self-parking residents, and resident guest valet will be located at the Ritz Carlton site. Therefore, the proposed redevelopment traffic was distributed at the study intersection. Note that credit for the traffic volumes accessing the existing Sagamore site was not taken at the study intersection, in order to provide a conservative analysis.

TRIP DISTRIBUTION AND ASSIGNMENT

The trip distribution was based on an interpolated cardinal trip distribution for the project site's traffic analysis zone (TAZ) obtained from the Miami-Dade Transportation Planning Organization's (TPO's) *2045 Long Range Transportation Plan Directional Trip Distribution Report*. The project is located within TAZ 644. The cardinal distribution is shown in Table 2.

Table 2: Cardinal Trip Distribution	
Cardinal Direction	**Percentage of Trips**
North-Northeast	14%
East-Northeast	0%
East-Southeast	0%
South-Southeast	0%
South-Southwest	16%
West-Southwest	32%
West-Northwest	19%
North-Northwest	19%
Total	**100%**

Figure 4 presents the peak hour net new trip distribution and Figure 5 presents the peak hour net new trip assignment. Note that as the P.M. peak hour trip generation generates more trips than the A.M. peak hour, the P.M. peak hour trip generation was used in the mid-day analysis, to provide a conservative analysis. Detailed cardinal distribution calculations are contained in Appendix G. Additionally, as Sagamore resident guest vehicles will be valeted within the on-site Ritz Carlton parking garage, Figures 6 and 7 detail the project's valet distribution and assignment for the peak hours.

Miami Beach, Florida

FUTURE TOTAL TRAFFIC

Future total traffic conditions are defined as the expected traffic conditions in the year 2025 after the opening of the project. Total traffic volumes considered in the analysis for this project are the sum of the background traffic volumes and the expected project traffic volumes. Figure 8 presents the future total turning movement volumes at the study intersections during the Thursday mid-day peak hour, Thursday P.M. peak hour, and Friday P.M. peak hour. Volume development worksheets for the study intersections are included in Appendix H.

Figure 8
Future Total Peak Hour Traffic
Lincoln Road East
Miami Beach, Florida

INTERSECTION OPERATIONAL ANALYSIS

The operating conditions for the study intersection were analyzed for three (3) scenarios (existing conditions, future background conditions, and future total conditions) using Trafficware's *SYNCHRO* software, which applies methodologies outlined in the Transportation Research Board's (TRB's) *Highway Capacity Manual* (HCM) 6th Edition/2000. The capacity and queuing analyses include the following factors to calibrate the transportation models:

- Peak Hour Factor
- Saturation flow factor (CBD)
- Right turns on red (RTOR)
- Pedestrian crossing volumes
- Conflicting pedestrian volumes
- Conflicting bicycle volumes
- On-street parking lanes
- Bus blockage
- Heavy vehicle percentages
- Critical and follow-up headways at unsignalized intersections
- Signal Timings
  - Pedestrian signal calls
  - Recall Mode
  - Minimum Initial
  - Yellow/All Red Time
  - Ped Walk Time
  - Ped Don't Walk Time
  - Vehicle Extension/Minimum Gap
  - Maximum Split
  - Offset
  - Platoon Ratio for coordinated approaches

Synchro worksheets for the study intersections are included in Appendix I.

A summary of the intersection capacity analysis is presented in Table 3. As indicated, the study intersection is expected to operate at adopted level of service (LOS) or better during the Thursday mid-day peak hour, Thursday P.M. peak hour, and Friday P.M. peak hour under all analysis scenarios with the exception of the eastbound approach which operates at LOS F during the Friday P.M. peak hour under all analysis scenarios and the westbound approach which operates at LOS F during the Friday P.M. peak hour under future total conditions. However, the streetscape project proposes to modify the westbound approach at the intersection of Collins Avenue/A1A and Lincoln Road from one (1) shared left-turn/through/right-turn lane to one (1) exclusive left-turn lane and one (1) shared through/right-turn lane. With the proposed improvements and signal timing

optimization, all approaches are expected to operate at adopted LOS or better during the Thursday mid-day peak hour, Thursday P.M. peak hour, and Friday P.M. peak hour under future total conditions, with the exception of the eastbound approach which operates at LOS F during the Friday P.M. peak hour under all analysis scenarios.

Table 3: Intersection Capacity Analysis

Peak Hour	Overall LOS/Delay	Approach LOS			
		EB	WB	NB	SB
Existing Conditions (Future Background Conditions) [Future Total Conditions]					
Thursday Mid-Day Peak Hour	B/12.1 sec (B/12.2 sec) [B/12.3 sec] (1)	C (C) [D]	D (D) [D]	A (A) [A]	A (A) [A]
Thursday P.M. Peak Hour (2)	C/29.7 sec (C/30.0 sec) [C/27.6 sec] (1)	D (D) [D]	D+1% (D+3%) [D]	C (C) [C]	C (C) [C]
Friday P.M. Peak Hour (2)	C/32.7 sec (C/33.0 sec) [C/31.6 sec] (1)	F (F) [F]	D+46% (D+46%) [D+18%]	C (C) [C]	B (B) [B]

Notes: (1) Signal timing optimized, and improvements implemented.
(2) Scenario cannot be analyzed using HCM 6th Edition. Therefore, HCM 2000 was used.

95TH PERCENTILE QUEUE ANALYSIS

A queue analysis was performed to determine if the existing turning movements storage lengths at the study intersection can accommodate expected 95th percentile vehicle queue lengths under existing, future background, and future total conditions. The 95th percentile queue lengths were calculated using Trafficware's *SYNCHRO 11* software, which applies methodologies outlined in the TRB's *HCM*, 2000/6th Edition. Synchro worksheets for the study intersections are included in Appendix I. A summary of the queue analyses for the Thursday mid-day peak hour, Thursday P.M. peak hour, and Friday P.M. peak hour is presented in Table 4. As indicated, the anticipated future queues are not expected to exceed the provided storage with the exception of the westbound left-turn/through/right-turn movement during the Thursday mid-day peak hour, Thursday P.M. peak hour, and Friday P.M. peak hour under existing and future background conditions. However, with the proposed improvements to the westbound approach as part of the 100 Block Streetscape, future queues are not expected to exceed the provided storage under future total conditions.

Table 4: 95th Percentile Queuing Analysis Summary

Movement	Storage Length (ft) [2]	95th Percentile Queue (ft)			Storage Sufficient?
		Thursday Mid-Day Peak Hour	Thursday P.M. Peak Hour	Friday P.M. Peak Hour	
Existing Conditions (Future Background Conditions) [Future Total Conditions]					
Eastbound Left-Turn	140	95 (95) [99]	115 (117) [122]	134 (134) [130]	Yes (Yes) [Yes]
Eastbound Through/ Right-Turn	140	88 (88) [83]	92 (94) [98]	77 (78) [78]	Yes (Yes) [Yes]
Westbound Left-Turn/ Through/Right-Turn[3]	145[3]	149 (151) [[3]]	177 (180) [[3]]	163 (163) [[3]]	No (No) [[3]]
Westbound Left-Turn	145	[2] ([2]) [62]	[2] ([2]) [59]	[2] ([2]) [62]	[2] ([2]) [Yes]
Westbound Through/ Right-Turn	145	[2] ([2]) [101]	[2] ([2]) [107]	[2] ([2]) [125]	[2] ([2]) [Yes]
Northbound Left-Turn/ Through/Right-Turn	465	158 (165) [147]	268 (272) [264]	399 (407) [411]	Yes (Yes) [Yes]
Southbound Left-Turn/ Through/Right-Turn	465	185 (192) [178]	268 (273) [272]	254 (260) [268]	Yes (Yes) [Yes]

Notes:
[1] The 95th percentile queue length is based on HCM methodology. Minimum queue of 25 feet assumed.
[2] Storage length based on distance to upstream intersection for non-exclusive turn lane movements.
[3] Approach does not exist under existing or future background conditions.
[3] Approach does not exist under future total condition with Lincoln Road 100 Block Streetscape.

VALET OPERATIONS ANALYSIS

The valet queuing operations analysis was performed to determine if valet operations could accommodate vehicular queues within the provided drop-off/pick-up areas without extending into the public right-of-way. Valet operations were analyzed for the number of valet attendants and required vehicle stacking for the redevelopment's proposed traffic.

The redevelopment will be served by the following two (2) valet drop-off and pick-up areas, including:

- The Sagamore Hotel porte-cochere will provide access to one (1) valet drop-off/pick-up area. The valet drop-off/pick-up area consists of one (1) valet drop-off/pick-up lane with storage for approximately three (3) vehicles and one (1) by-pass lane. Please note that the Sagamore Hotel porte-cochere will exclusively serve resident guests.
- The Ritz Carlton porte-cochere which consists of one (1) valet drop-off/pick-up area will be reconfigured with storage for approximately four (4) vehicles in the outer curb lane, three (3) vehicles in the inner lane, and one (1) by-pass lane as part of the streetscape project. Both lanes are used as rideshare and valet vehicle drop-off/pick-up The Ritz Carlton porte-cochere will valet all vehicles of the hotel guests for both the Ritz Carlton and Sagamore Hotel.

All resident vehicles will be self-parked within the on-site Ritz Carlton parking garage. Graphic illustrations of the proposed valet routes to and from the valet drop-off/pick-up areas and the on-site Ritz Carlton parking garage are provided in Appendix J.

SAGAMORE PORTE-COCHERE QUEUE ANALYSIS

Trip generation calculations for the proposed redevelopment were performed using the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 11th Edition. The trip generation for the proposed redevelopment was determined using ITE Land Use Code (LUC) 310 (Hotel) and LUC 221 (Multifamily Housing [Mid-Rise]). It is assumed that 10 percent (10%) of the Sagamore Hotel redevelopment is resident guests.

The valet analysis was prepared for the weekday A.M. and weekday P.M. peak hours. The proposed Sagamore Hotel redevelopment is expected to generate one (1) pick-up valet trip during

the A.M. peak hour and one (1) drop-off valet trip during the P.M. peak hour. Note that the Sagamore Hotel redevelopment residential guest trips were determined based on the assumption that 10 percent (10%) of the generated trips are residential guests.

VALET ASSUMPTIONS

The valet analysis was prepared based on the methodology outlined in *ITE's Transportation and Land Development*, 1988. The queuing analysis used the multiple-channel waiting line model with Poisson arrivals and exponential service times. The queuing analysis is based on the coefficient of utilization, ρ, which is the ratio of the average vehicle arrival rate over the average service rate multiplied by the number of valet attendants.

Valet attendants will be stationed at the valet drop-off/pick-up areas. Valet drop-off trip service times were calculated based on the time it would take a valet parking attendant to obtain and park a drop-off vehicle within the on-site Ritz Carlton parking garage and return to the valet drop-off area. Valet pick-up trip service times were calculated based on the time it would take a valet parking attendant to bring a parked vehicle back to a guest at the valet pick-up area.

The service time for valet drop-off operation corresponds to the following:

- Exchange between valet attendant and driver (1.5 minute)
- Valet attendant drives vehicle from valet drop-off location to valet parking lot (1.0 minutes)
- Valet attendant parks vehicle in parking space (0.2 minutes)
- Valet attendant walks/runs from valet parking lot to porte-cochere (1.2 minutes)
- Total service rate: 3.9 minutes

The service time for valet pick-off operation corresponds to the following:

- Valet attendant walks/runs from porte-cochere to valet parking lot (1.2 minutes)
- Valet attendant retrieves vehicle in parking space (0.5 minutes)
- Valet attendant drives vehicle from valet parking lot to porte-cochere (0.8 minutes)
- Exchange between valet attendant and driver (1.5 minute)
- Total service rate: 4.0 minutes

Detailed travel time calculations are included in Appendix J.

If the coefficient of utilization (average service rate/valet attendant service capacity) is greater than one (> 1), the calculation methodology does not yield a finite queue length. This result indicates overcapacity conditions for the valet area. The valet attendant service capacity is the number of total trips a valet attendant can make in a one-hour period multiplied by the number of valet attendants.

The analysis determined the required queue storage, *M*, which is exceeded *P* percent of the time. This analysis seeks to ensure that the queue length does not exceed the storage provided at a level of confidence of 95 percent (95%). Three (3) vehicle drop-off/pick-up spaces are provided for valet operations based on the attached site plan.

VALET ANALYSIS

An iterative approach was used to determine the number of valet attendants required to accommodate the proposed redevelopment demand during the analysis hour and ensure that the 95th percentile valet queue does not extend beyond the designated valet service area. Detailed valet analysis worksheets are provided in Appendix J.

Results of the highest demand condition valet operations analysis demonstrate that one (1) valet attendant would be required to accommodate vehicle drop-off/pick-up demand.

RITZ CARLTON PORTE-COCHERE QUEUE ANALYSIS

Peak period queue accumulation data was collected during two (2) hour periods on July 21, 2022 (Thursday) from 12:00 P.M. to 2:00 P.M. and on July 23, 2022 (Saturday) from 4:30 P.M. to 6:30 P.M. Valet operations at the redevelopment were analyzed to determine if porte-cochere queues can be accommodated on-site without extending into the cul-de-sac during the weekday and weekend peak periods.

The valet area consists of one (1) outer lane (approximately 160’ feet) and one (1) inner lane (approximately 75’ feet). There is sufficient storage for approximately six (6) vehicles in the outer lane and three (3) vehicles in the inner lane. Both lanes are used as rideshare and valet vehicle drop-off/pick-up.

Four (4) valet attendants including a manager served valet during the weekday peak period and weekend peak period. The porte-cochere queues reached a maximum of five (5) vehicles with four

(4) vehicles in the inner lane and one (1) vehicle in the outer lane. To accommodate the relocation of the Sagamore Hotel valet to the Ritz Carlton porte-cochere, the maximum queue and number of valet attendants were proportionally factored based off the number of hotel rooms within the existing Ritz Carlton and proposed Sagamore Hotel redevelopment. As the existing Ritz Carlton observed a maximum queue of five (5) vehicles with 373 existing hotel rooms, an addition of 51 rooms from the Sagamore Hotel redevelopment, or 424 hotel rooms in total, would result in a maximum queue of approximately 6 vehicles. Additionally, it is expected that five (5) valet attendants would be needed to accommodate the increase in demand. With a sufficient storage capacity for approximately nine (9) vehicles in existing conditions and seven (7) vehicles in future total conditions with the 100 Block streetscape, it is expected that queues will not extend beyond the valet porte-cochere with five (5) valet attendants. Collected queuing data is provided in Appendix J.

PEDESTRIAN CROSSING EVALUATION

Existing pedestrian volumes crossing at the Ritz Carlton parking garage and loading driveway were evaluated and compared to expected future conditions with the streetscape project in-place. Pedestrian volumes collected in July 2022 crossing at the Ritz Carlton parking garage and loading driveway were factored by pedestrian volumes collected at the intersection of Collins Avenue and Lincoln Road in January 2023/March 2023 to account for any seasonal changes. Based on the data collected in January and March 2023, pedestrian adjustment factors of 0.94 was calculated for the Thursday mid-day peak hour, 1.16 was calculated for the Thursday P.M. peak hour, and 0.85 was calculated for the Friday P.M. peak hour. In order to provide a conservative analysis, the pedestrian adjustment factors were only applied when above 1.00. As a result of the proposed streetscape improvements, it is expected that a portion of pedestrians will choose to access the beach via the shared use path along south sidewalk which as a maximum width of 18.5 feet and is designed in a manner to provide more direct access to the beach walk than the sidewalk on the north side of Lincoln Road. Therefore, 50 percent (50%) of non-Ritz Carlton pedestrian traffic was reassigned to access the beach via the shared use path along the south sidewalk. A summary of the pedestrian crossing evaluation is presented in Table 5. Peak pedestrian traffic volumes at the Ritz Carlton Porte-Cochere Exit Driveway and Ritz Carlton Loading Driveway are included in Appendix C. Detailed pedestrian crossing calculations are provided in Appendix K.

Table 5: Loading Driveway Conflicting Pedestrian

Pre-Streetscape Conditions	Future Conditions
Thursday Mid-Day Peak Hour (Thursday P.M. Peak Hour) [Friday P.M. Peak Hour]	
227 (356) [302]	186 (215) [209]

MANEUVERABILITY ANALYSIS

A maneuverability analysis was prepared for the ground level passenger vehicle circulation areas and loading area. The analysis was performed using Transoft's *AutoTurn 11* software design vehicle turning templates and vehicle turning templates consistent with American Association of State Highway and Transportation Officials' (AASHTO) *A Policy on Geometric Design of Highways and Streets*, 2018. The analysis was prepared using a passenger (P) vehicle, single unit (SU-30) truck, modified WB-62 semi-trailer, and City of Miami Beach emergency/fire truck for the proposed loading area.

The analysis determined that the loading vehicles and the City of Miami Beach emergency/fire truck are expected to be able to ingress, egress, and travel within the ground level without conflicting with oncoming traffic. Additionally, loading vehicles will be able to maneuver into loading spaces within the loading area and will not need to reverse (back-in) into the site from the street. As a result, loading vehicles are not expected to reverse through the pedestrian crossing area at the loading driveway, and will be able to enter the site head-on. This allows for greater visibility of pedestrians within the crosswalk and improved safety. Vehicles accessing the Deco Plage will be able to ingress and egress without conflicting with oncoming traffic. Maneuverability analysis plots are included in Appendix L.

TRANSPORTATION DEMAND MANAGEMENT STRATEGIES

Transportation Demand Management (TDM) strategies are proposed for the Sagamore Hotel redevelopment to reduce the impacts of the project traffic on the surrounding roadway network City of Miami Beach provide public transit in close proximity to the project site. In addition, other measures are under consideration to encourage people to use public transportation, use bicycles and walk, and find alternatives to the typical workday hours. The applicant proposes the following TCMs:

- Secure bicycle parking spaces (bike racks and lockers)
- Improved and enhanced (wide) sidewalks around the site
- Elevators that can accommodate bikes
- Lockers for bicyclists to store a change of clothes will be provided on-site
- Shower facility for bicyclists will be provided on-site

PARKING EVALUATION

The required parking for the site, based on the City of Miami Beach Code of Ordinances, is 189 parking spaces. As part of the proposed redevelopment, 238 parking spaces will be provided with two (2) parking spaces provided on-street and 236 parking spaces provided on-site. Additionally, 129 bicycle spaces will be provided. As part of the 100 Block streetscape project, the freight loading zone, two (2) taxi/cab spots, and four (4) motorcycle pay-to-park spots along the south side of Lincoln Road are proposed to be removed. The freight loading zone is proposed to be relocated to the north side of Lincoln Road. Note that with the relocation of the freight loading, four (4) parking spaces will be removed, including one (1) emergency/city vehicle space and three (3) pay-to-park spaces. Please refer to the detailed parking calculations prepared by others contained in Appendix M.

CONCLUSION

Sobe Sky Development, LLC is proposing a streetscape project for Lincoln Road and to redevelop the Sagamore Hotel. The streetscape project is bounded by Collins Avenue/SR A1A to the west and the public beach access/Ritz Carlton Hotel loading dock and parking garage access to the east, referred to as the 100 Block, in Miami Beach, Florida. Lincoln Road, east of Collins Avenue/SR A1A consists of one (1) 20-foot lane in each direction (wide enough to accommodate two [2] lanes but not designated as such), on-street parking on the north and south sides of the road, and a curbed 9.5-foot median. Lincoln Road terminates to the east at the public beach access in a cul-de-sac street-end with a curbed median island. The proposed project examines the appropriate laneage for the roadway configuration to provide for a wider pedestrian sidewalk along the south side of Lincoln Road. The streetscape project will also include reconfiguring the Ritz Carlton porte-cochere.

Additionally, the existing 93-room Sagamore Hotel (1671 Collins Avenue) is proposed to be redeveloped. The redevelopment includes a 51-room hotel and 30 mid-rise multifamily residential units. Currently, access to the Sagamore Hotel is provided by a porte-cochere on Collins Avenue north of Lincoln Road. The redevelopment will relocate the Sagamore Hotel access to the Ritz Carlton Hotel porte-cochere. Sagamore residents will self-park within the Ritz Carlton garage located on Lincoln Road. Sagamore resident guests will use the existing Sagamore porte-cochere on Collins Avenue to valet their vehicles or for rideshare drop-off/pick-up. The project is expected to be completed and opened by year 2025.

Trip generation for the proposed redevelopment was calculated using rates contained in the Institute of Transportation Engineers' (ITE's) *Trip Generation Manual*, 11th Edition. The project is expected to result in a reduction of seven (7) net new weekday A.M. peak hour trips and a reduction of ten (10) net new weekday P.M. peak hour trips.

The results of the intersection capacity analysis indicate that the study intersection is expected to operate at adopted level of service (LOS) or better during the Thursday mid-day peak hour, Thursday P.M. peak hour, and Friday P.M. peak hour under all analysis scenarios with the exception of the eastbound approach which operates at LOS F during the Friday P.M. peak hour under all analysis scenarios and the westbound approach which operates at LOS F during the

Friday P.M. peak hour under future total conditions. However, the streetscape project proposes to modify the westbound approach at the intersection of Collins Avenue/A1A and Lincoln Road from one (1) shared left-turn/through/right-turn lane to one (1) exclusive left-turn lane and one (1) shared through/right-turn lane. With the proposed improvements and signal timing optimization, all approaches are expected to operate at adopted LOS or better during the Thursday mid-day peak hour, Thursday P.M. peak hour, and Friday P.M. peak hour under future total conditions, with the exception of the eastbound approach which operates at LOS F during the Friday P.M. peak hour under all analysis scenarios.

The results of the 95th percentile queue analysis indicate that the anticipated future queues are not expected to exceed the provided storage with the exception of the westbound left-turn/through/right-turn movement during the Thursday mid-day peak hour, Thursday P.M. peak hour, and Friday P.M. peak hour under existing and future background conditions. However, with the proposed improvements to the westbound approach as part of the 100 Block Streetscape, future queues are not expected to exceed the provided storage under future total conditions.

The results of the weekday A.M. and P.M. peak hours valet operations analysis demonstrate that one (1) valet attendant would be required to accommodate vehicle drop-off/pick-up demand at the Sagamore Hotel porte-cochere. Furthermore, the seven (7) vehicles of storage capacity for the reconfigured Ritz Carlton porte-cochere is expected to be sufficient and provide enough storage capacity for the increased demand.

The maneuverability analysis determined that the loading vehicles and the City of Miami Beach emergency/fire truck are expected to be able to ingress, egress, and travel within the ground level without conflicting with oncoming traffic. Additionally, loading vehicles will be able to maneuver into loading spaces within the loading area and will not need to reverse (back-in) into the site from the street. As a result, loading vehicles are not expected to reverse through the pedestrian crossing area at the loading driveway, and will be able to enter the site head-on. This allows for greater visibility of pedestrians within the crosswalk and improved safety.

TDM strategies are proposed to reduce the impacts of the project traffic on the surrounding roadway network City of Miami Beach provide public transit in close proximity to the project site. In addition, other measures are under consideration to encourage people to use public

transportation, use bicycles and walk, and find alternatives to the typical workday hours. The applicant proposes the following TDMs:

- Secure bicycle parking spaces (bike racks and lockers)
- Improved and enhanced (wide) sidewalks around the site
- Elevators that can accommodate bikes
- Lockers for bicyclists to store a change of clothes will be provided on-site
- Shower facility for bicyclists will be provided on-site

The required parking for the site, based on the City of Miami Beach Code of Ordinances, is 189 parking spaces. As part of the proposed redevelopment, 238 parking spaces will be provided with two (2) parking spaces provided on-street and 236 parking spaces provided on-site. Additionally, 129 bicycle spaces will be provided. As part of the 100 Block streetscape project, the freight loading zone, two (2) taxi/cab spots, and four (4) motorcycle pay-to-park spots along the south side of Lincoln Road are proposed to be removed. The freight loading zone is proposed to be relocated to the north side of Lincoln Road. Note that with the relocation of the freight loading, four (4) parking spaces will be removed, including one (1) emergency/city vehicle space and three (3) pay-to-park spaces.

Categories: External

Good afternoon Adrian,

Following an internal meeting with our peer reviewer, we recommend approval of the methodology and for the applicant to move forward with the study with the following conditions.

- The applicant to provide detailed pedestrian crossing evaluation crossing the Ritz Carlton parking garage and loading driveway with the proposed streetscape project.
- As part of the maneuverability analysis, perform the AutoTURN software with the emergency/fire truck and also for the different types of vehicles coming out of the development from the southside of the Lincoln Road.

MEMORANDUM

To: Dani Fawaz, P.E.
City of Miami Beach

From: Adrian K. Dabkowski, P.E., PTOE

Date: March 22, 2023

Subject: Lincoln Road East
100 Block Streetscape and Sagamore Hotel Redevelopment
Response to Traffic Impact Analysis Methodology Comments

We have received comments provided by the City of Miami Beach's Transportation Department on March 14, 2023. We offer the following responses to the comments:

1. Page 2, Background Growth Rate – As discussed in the methodology meeting on March 8, 2023, please clarify the buildout date for the project to be consistent with the Capacity Analysis described in Page 3.

   Response: The methodology was updated to state that buildout date for the project is 2025. Refer to the updated methodology in Attachment A-A.

2. Page 3, Capacity Analysis – Due to the eastbound vehicular traffic closure and the proposed conversion to pedestrian mall extension of the Lincoln Road from the Lincoln Road Pedestrian Mall Extension project, there will be an increase in pedestrian activity crossing the Collins Avenue/SR A1A at Lincoln Road. Please incorporate the pedestrian growth as part of the Build capacity analysis.

   Response: Please note that Lincoln Road Pedestrian Mall Extension project has a buildout year of 2028. As the buildout year of the 100 Block Streetscape and Sagamore Hotel redevelopment is 2025, the pedestrian volumes will not be grown for this analysis. It is also noted that the Lincoln Road Pedestrian Mall Extension study should incorporate the 100 Block Streetscape and Sagamore Hotel redevelopment.

3. Page 4, Valet Operational Analysis – Due to the relocation of the Sagamore Hotel parking from Collins Avenue to the Ritz-Carlton Hotel along Lincoln for both the hotel and residents, please analyze the impacts to the pedestrians due to the increased traffic due to the loading dock and parking garage access.

   Response: Please note that the redesign of the beach walk and south side of Lincoln Road is expected to ameliorate the safety concerns for pedestrians by encouraging pedestrians to use the wide southern sidewalk that serves as a shared use path to access the beach. Additionally, back-in maneuvers will be internalized for loading vehicles so that trucks can avoid using the street-end and drive aisles to reverse into the loading driveway.

   Pedestrian crossing volumes will be examined at the Ritz Carlton parking garage and loading driveway will be examined and redistributed to account for the streetscape project. The updated methodology in Attachment A-A was updated to provide this analysis.

4. Parking – Please provide documentation to indicate the availability of parking for the 51-room hotel and 30 mid-rise residential units at the Ritz-Carlton Hotel due to the relocation of the Sagamore Hotel parking from Collins Avenue to the Ritz-Carlton Hotel

   Response: Please note that parking calculations will be included within the traffic impact analysis. The methodology memorandum has been updated to include a Parking Evaluation section. The updated methodology is included in Attachment A-A.

5. General – As discussed in the methodology meeting on March 8, 2023, please provide adequate sidewalk connectivity within the area of influence along Lincoln Road and Collins Avenue/SR A1A.

   Response: Please note a dimensioned plan will be provided as part of the HPB submittal.

6. General – Please confirm no loss of on-street parking along both sides of Lincoln Road due to proposed lanes in the westbound direction of Lincoln Road. In addition, please consider and negate any impacts on the operations from the on-street parking vehicles with the additional traffic in the westbound direction due to the relocation of the parking for the Sagamore Hotel redevelopment.

   Response: Noted. A review of on-street parking will be provided as part of the traffic impact analysis and a section was added to the updated methodology in Attachment A-A.

7. General – Please incorporate the diversion of traffic from the Lincoln Road Pedestrian Mall Extension project along Collins Avenue/SR A1A for all the intersections within the study area.

   Response: Please note that Lincoln Road Pedestrian Mall Extension project has a buildout year of 2028. As the buildout year of the 100 Block Streetscape and Sagamore Hotel redevelopment is 2025, the pedestrian volumes will not be grown for this analysis. It is also noted that the Lincoln Road Pedestrian Mall Extension study should incorporate the 100 Block Streetscape and Sagamore Hotel redevelopment.

We trust that this response adequately addresses the comment provided. Please contact us should you have any questions.

Updated Traffic Study Methodology

Kimley»Horn

MEMORANDUM

To: Dani Fawaz, P.E.
City of Miami Beach

From: Adrian K. Dabkowski, P.E., PTOE AK

Date: March 22, 2023

Subject: Lincoln Road East
100 Block Streetscape and Sagamore Hotel Redevelopment
Traffic Impact Analysis Methodology

The purpose of this memorandum is to summarize the traffic impact analysis methodology for the Lincoln Road East, 100 Block Streetscape and Sagamore Hotel redevelopment. The Lincoln Road streetscape project limits are Collins Avenue/SR A1A to the west and the public beach access/Ritz-Carlton Hotel loading dock and parking garage access to the east. Lincoln Road, east of Collins Avenue/SR A1A consists of one (1) 20-foot lane in each direction (wide enough to accommodate two [2] lanes), on-street parking on the north and south sides of the road, and a curbed 9.5-foot median. Lincoln Road terminates to the east at the public beach access in a cul-de-sac street-end with a curbed median island. The proposed project will examine the appropriate laneage for the roadway configuration to provide for a wider pedestrian sidewalk along the south side of Lincoln Road.

Additionally, the existing 93-room Sagamore Hotel will be redeveloped to consist of a 51-room hotel and 30 mid-rise residential units. Currently, access to the Sagamore Hotel is provided by a porte-cochere on Collins Avenue north of Lincoln Road. The redevelopment will relocate the Sagamore Hotel access to the Ritz-Carlton Hotel porte-cochere. Sagamore residents will self-park within the Ritz Carlton garage located on Lincoln Road. Sagamore resident guests will use the existing Sagamore porte-cochere on Collins Avenue to valet their vehicles or for rideshare drop-off/pick-up. The project is expected to be completed by 2025. A project location map and initial concept plan are provided as Attachment A. The following sections summarize our proposed methodology.

TRIP GENERATION

Trip generation calculations for the Sagamore hotel redevelopment for the existing development and proposed redevelopment were performed using the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 11th Edition. The trip generation for the existing land use was determined using ITE Land Use Code LUC 310 (Hotel). The trip generation for the proposed land uses was determined using ITE LUC 310 (Hotel) and LUC 221 (Mid-Rise, Multifamily Housing).

A multimodal (public transit, bicycle, and pedestrian) factor based on US Census *Means of Transportation to Work* data was reviewed for the census tract in the vicinity of the redevelopment. The US Census data indicated that there is a 29.3 percent (29.3%) multimodal factor within the vicinity of the development. Note, that the multimodal factor was capped at 20.0 percent (20.0%) as required by City of Miami Beach. It is expected that residents, patrons, and visitors will choose to walk, bike, or use public transit to and from the proposed development. Transit route information will be documented in the report. Detailed trip generation calculations and US Census *Means of Transportation to Work* data are included in Attachment B.

The proposed redevelopment is expected to result in a reduction of 7 net new vehicle trips during the weekday A.M. peak hour and a reduction of 10 net new vehicle trips during the P.M. peak hour. Detailed trip generation calculations are included as Attachment B.

DATA COLLECTION

Consistent with the approved traffic study methodology for the Lincoln Road Pedestrian Mall Extension, the same 72-hour continuous counts were used to determine the peak traffic periods for analysis. The 72-hour continuous counts were gathered at the following two (2) locations from Thursday, June 16, 2022, through Saturday, June 18, 2022, and evaluated:

1. Collins Avenue/SR A1A, north of Lincoln Road
2. Lincoln Road, east of Collins Avenue/A1A

Based on the peak periods observed, turning movement counts (TMC's) will be collected on a Thursday from 10:30 A.M. to 1:30 P.M., 2:30 P.M. to 6:30 P.M., and on a Friday from 3:30 P.M. to 5:30 P.M to capture peak traffic volumes at the intersections of Lincoln Road and Collins Avenue/SR A1A.

Turning movement counts were collected in 15-minute intervals during the peak period. Turning movement counts include pedestrian and bicyclist volumes. All traffic counts will be adjusted to peak season conditions using the appropriate Florida Department of Transportation (FDOT) peak season category factors. All traffic data will be provided in the Appendix of the traffic impact study. The 72-hour continuous counts are included in Attachment B.

STUDY AREA

Intersection capacity analyses will be conducted for the analysis peak hours to determine the impacts of the proposed streetscape laneage plan at the intersection of Collins Avenue/SR A1A and Lincoln Road.

PROGRAMMED ROADWAY IMPROVEMENTS

Local transportation plans will be reviewed in order to gather information about planned and programmed transportation improvements in the study area. Relevant projects will be documented within the traffic impact analysis. The purpose of the plan review is to identify programmed capacity improvements for consideration in the analysis. The following transportation plans will be examined:

- Miami Beach Transportation Master Plan
- Miami-Dade Transportation Planning Organization's (TPO) Transportation Improvement Program (TIP)
- FDOT's Five-Year Work Program

BACKGROUND GROWTH RATE/MAJOR COMMITTED DEVELOPMENT

A background growth rate was calculated based on historical growth trends at nearby Florida Department of Transportation (FDOT) traffic count stations. Additionally, growth rates based on the TPO's projected 2015 and 2045 model network volumes were examined. The greater of the historical growth rate and SERPM growth rate will be used in the analysis. FDOT count stations referenced in this analysis include:

- FDOT count station no. 5159 located on SR A1A/Collins Avenue, north of 5th Street
- FDOT count station no. 5170 located on SR A1A/Collins Avenue, north of 21st Street

- FDOT count station no. 8414 located on Washington Avenue, north of 12th Street
- FDOT count station no. 8531 located on 17th Street, east of Meridian Avenue
- FDOT count station no. 8567 located on 16th Street, east of Meridian Avenue

The historic growth rate analysis, based on FDOT count stations, examined linear, exponential, and decaying exponential growth rates for the most recent five (5) and 10-year periods. The linear growth trend yielded an average growth rate of negative 2.24 percent (-2.24%) over the most recent five (5) year period and negative 0.55 percent (-0.55%) over the most recent ten (10) year period. The exponential growth trend yielded a growth rate of negative 2.85 percent (-2.85%) over the most recent five (5) year period and negative 0.57 percent (-0.57%) over the most recent ten (10) year period. The decaying exponential growth trend yielded a growth rate of negative 2.29 percent (-2.29%) over the most recent five (5) year period and negative 0.20 percent (-0.20%) over the most recent ten (10) year period.

Based on the forecasted volumes obtained from the 2015 and 2045 FSUTMS SERPM 8.521, an annual growth rate of 0.36 percent (0.36%) in the vicinity of the development was calculated. To provide a conservative analysis, a minimum growth rate of 0.50 percent (0.50%) will be applied annually to the existing traffic volumes to establish future (2025) background conditions. Detailed growth rate calculations are included in Attachment C.

The City's review of this document will determine any committed projects to include in background conditions. The City will provide the corresponding approved traffic study for any committed projects identified.

CAPACITY ANALYSIS

Capacity analyses will be conducted for the analysis period for the study intersections. Intersection analyses will be performed using Trafficware's *Synchro* traffic engineering analysis software which applies the Transportation Research Board's (TRB's), *Highway Capacity Manual* (HCM), 2000 and 6th Edition methodologies. Capacity analyses will be conducted for three (3) scenarios including:

- Existing (2023) conditions,
- Future (2025) no-build conditions
- Future (2025) build (with Streetscape) conditions

The capacity analyses will include the following factors to calibrate the transportation models:

- Peak Hour Factor
- Pedestrian crossing volumes
- Conflicting pedestrian volumes
- Conflicting bicycle volumes
- On-street parking lanes
- Bus blockage
- Heavy vehicle percentages
- Critical and follow-up headways at unsignalized intersections
- Signal Timings
    - Pedestrian signal calls
    - Recall Mode

- Minimum Initial
- Yellow Time
- All Red Time
- Ped Walk Time
- Ped Don't Walk Time
- Vehicle Extension/Minimum Gap
- Maximum Split
- Offset
- Platoon Ratio for coordinated approaches

The following figures will be included for the study intersections:

- Existing peak hour volumes
- Existing laneage
- Future peak hour volumes
- Proposed future laneage

95TH PERCENTILE QUEUE ANALYSIS

A queue analysis will be performed to determine if the existing storage lengths for exclusive turn lanes and the westbound approach at study area intersection can accommodate expected 95th percentile vehicle queue lengths under existing, future background, and future total conditions. The 95th percentile queue lengths will be calculated using Trafficware's *SYNCHRO 11* software, which applies methodologies outlined in the TRB's HCM, 2000/6th Edition.

VALET OPERATIONS ANALYSIS

A queue analysis will be performed for the existing Ritz-Carlton porte-cochere to determine the space needed to accommodate vehicle queues during peak times. Based on information provided by the hotel and the 72-hour count data gathered, maximum valet queues will be gathered in one-minute intervals during the peak valet times of Thursday 12 to 2 PM and Saturday 4:30 to 6:30 PM. These maximum valet queues will be used in the proposed layout. Additionally, the maximum queues will be factored proportionally to account for the Sagamore Hotel valet traffic that will use the Ritz-Carlton porte-cochere.

A queue analysis will be performed for the proposed Sagamore porte-cochere for resident guests. The analysis will be based on the highest trip generation peak hour assuming that 10 percent of the residential redevelopment is resident guest. The valet queuing analysis will be conducted consistent with procedures described in the ITE's *Transportation and Land Development*, 1988.

PEDESTRIAN CROSSING EVALUATION

Existing pedestrian volumes crossing at the Ritz Carlton parking garage and loading driveway will be evaluated and compared to expected future conditions with the streetscape project in-place. Pedestrian volumes collected in July 2022 crossing at the Ritz Carlton parking garage and loading driveway will be factored by pedestrian volumes collected at the intersection of Collins Avenue and Lincoln Road in January 2023/March 2023 intersection turning movement counts. The pedestrian volumes crossing at the Ritz Carlton parking garage and loading driveway will be adjusted to account for the streetscape project and wide sidewalk on the southside of Lincoln Road that serves as a shared use path to access the beach.

MANEUVERABILITY ANALYSIS

A maneuverability analysis for the Lincoln Road street-end will be performed utilizing Transoft Solutions' *AutoTURN* software. Deficiencies related to maneuverability, traffic flow, and vehicular conflicts will be documented in a technical memorandum as part of the traffic study.

TRANSPORTATION DEMAND MANAGEMENT STRATEGIES

Demand Management (TDM) strategies for the Sagamore hotel redevelopment will be developed to reduce the impact of project traffic on the surrounding roadway network and promote trip reduction. Typical measures promote bicycling and walking, encourage car/vanpooling and offer alternatives to the typical workday hours.

PARKING EVALUATION

A summary of the proposed parking supply to accommodate the Sagamore Hotel redevelopment be prepared and included as part of the traffic study based on parking calculations prepared by others.

The impacts of the streetscape design on on-street parking will also be documented in the parking evaluation section of the traffic study.

DOCUMENTATION

The results of the traffic impact analysis will be summarized in a report. The report will include graphics and tabulations plus text to describe the study procedure, key assumptions, and findings.

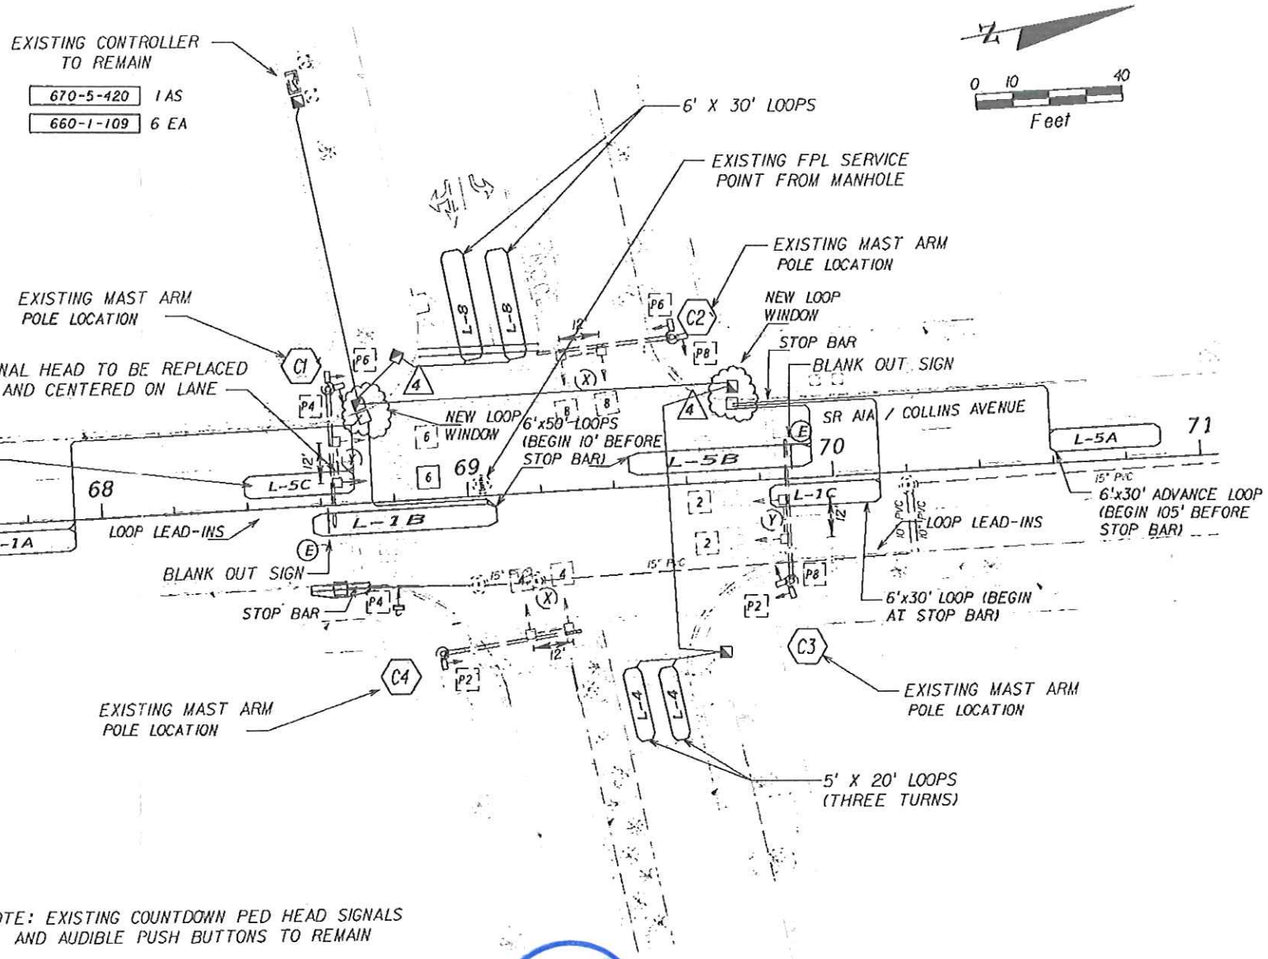
(P2) (P6) (P4) (P8)



GENERAL NOTES:

1. SIGNAL TIMING TO BE PROVIDED BY MIAMI-DADE COUNTY SIGNAL DIVISION.
2. THE CONTRACTOR SHALL INSTALL CONDUITS TO AVOID ANY DAMAGE TO EXISTING LOOPS AND THEIR OPERATION. ANY DAMAGE TO EXISTING LOOPS AND THEIR OPERATION DURING CONSTRCTION SHALL BE AT THE CONTRACTOR EXPENSE AND REPLACED IN ACCORDANCE WITH LATEST FDOT AND MIAMI DADE TRAFFIC SIGNAL AND SIGN DIVISION STANDARDS.
3. SIDEWALK FLAG REPLACEMENT DUE TO PULL BOX INSTALLATION SHALL BE INCLUDED IN THE COST OF PULL BOX PAY ITEM 635-1-11

PROJECT NUMBER	PROJECT NAME	CITY AREA	PROJECT TYPE	FROM	TO	PROJECT LENGTH (MILES)	PROJECT DESCRIPTION	PURPOSE & NEED
44	**16th Street Bicycle Facilities Improvements**	South	Bike/Ped	Bay Road	Collins Avenue	0.83	Phase I of the project proposes the improvement of the existing Bicycle Lanes by painting them green. Phase II of the project includes the implementation of Protected Bicycle Lanes along the corridor.	16th Street requires an improvement towards local non-motorized transportation infrastructure connectivity. Develop a safe, complete, and accessible multi-user citywide bicycle and pedestrian network. Promote non-motorized transportation as a reliable mode of travel within the City.
45	**47th Street Enhanced Bicycle Lane**	Middle	Bike/Ped	North Bay Road	Pine Tree Drive	0.66	Enhanced (Green) Bike Lane for the corridor, including the portion between Alton Road and North Bay Road.	47th Street requires an improvement towards local non-motorized transportation infrastructure connectivity. Develop a safe, complete, and accessible multi-user citywide bicycle and pedestrian network. Promote non-motorized transportation as a reliable mode of travel within the City.
46	**42nd Street Enhance Bicycle Lanes**	Middle	Bike/Ped	Prairie Avenue	Pine Tree Drive	0.25	Enhanced (Green) Bike Lane for the corridor.	42nd Street requires an improvement towards local non-motorized transportation infrastructure connectivity. Develop a safe, complete, and accessible multi-user citywide bicycle and pedestrian network. Promote non-motorized transportation as a reliable mode of travel within the City.

PRIORITY 2 PROJECTS

Table 40: Priority 2 Projects

PROJECT NUMBER	PROJECT NAME	CITY AREA	PROJECT TYPE	FROM	TO	PROJECT LENGTH (MILES)	PROJECT DESCRIPTION	PURPOSE & NEED
1	**17th Street Exclusive transit and protected/buffered bicycle lanes**	South	Transit/Bike& Ped	Washington Avenue	Collins Avenue	0.14	Evaluation of Exclusive transit and/or protected/buffered bicycle lanes *(Lane repurposing and/or roadway widening),*	17th Street requires an improvement towards regional and local connectivity. Improve the speed, reliability, comfort and convenience of transit.
2	**SR A1A / Collins Avenue / Indian Creek Drive Exclusive transit and protected/buffered bicycle lanes**	South / Middle	Transit/Bike& Ped	17th Street	44th Street	2.76	Exclusive transit and protected/buffered bicycle lanes *(Lane repurposing and/or roadway widening),* Enhanced crosswalks	SR A1A / Collins Avenue / Indian Creek Drive requires an improvement towards regional and local connectivity. Improve the speed, reliability, comfort and convenience of transit. Serve new markets and support economic vitality.
3	**Meridian Avenue Protected/buffered bicycle lanes**	South / Middle	Bike/Ped	16th Street	28th Street	1.04	Protected/buffered bicycle lanes *(Lane repurposing and/or roadway widening),* Enhanced crosswalks	Meridian Avenue requires an improvement towards local non-motorized transportation infrastructure connectivity. Develop a safe, complete, and accessible multi-user citywide bicycle and pedestrian network. Promote non-motorized transportation as a reliable mode of travel within the City.

PROJECT NUMBER	PROJECT NAME	CITY AREA	PROJECT TYPE	FROM	TO	PROJECT LENGTH (MILES)	PROJECT DESCRIPTION	PURPOSE & NEED
10	**44th Street AND SR A1A / Collins Avenue Safety Feasibility Study**	Middle	Bike/Ped	44th Street	SR A1A / Collins Avenue	N/A	Safety Feasibility Study	Improve multimodal vehicular operations along the corridor of 44th Street AND SR A1A / Collins Avenue
11	**Meridian Avenue Bicycle Greenway Analysis**	South	Bike/Ped	1st Street	16th Street	1	Neighborhood Greenway(Boulevard Markers and Traffic Calming) Enhanced crosswalks	Meridian Avenue requires an improvement towards local non-motorized transportation infrastructure connectivity. Develop a safe, complete, and accessible multi-user citywide bicycle and pedestrian network. Promote non-motorized transportation as a reliable mode of travel within the City.
12	**Lincoln Road Shared Space**	South	Bike/Ped	Washington Avenue	Collins Avenue	0.12	Shared Space including changes to pavement and various multi-modal accommodations.	Meridian Avenue requires an improvement towards local non-motorized transportation infrastructure connectivity. Develop a safe, complete, and accessible multi-user citywide bicycle and pedestrian network. Promote non-motorized transportation as a reliable mode of travel within the City.

Project Number	Project Name	City Area	Project Type	From	To	Project Length (Miles)	Project Description	Purpose & Need
13	**Lincoln Lane North Bicycle Connection/ Neighborhood Greenway**	South	Bike/Ped	Alton Road	Washington Avenue	0.57	Exploring the various typical sections of the alleyway to create an exclusive bicycle lane or Neighborhood Greenways.	Lincoln Lane North requires an improvement towards local non-motorized transportation infrastructure connectivity. Develop a safe, complete, and accessible multi-user citywide bicycle and pedestrian network. Promote non-motorized transportation as a reliable mode of travel within the City.
14	**Fairway Drive Shared-Use Path**	North	Bike/Ped	Biarritz Drive	Bay Drive	1.10	Shared-Use Path adjacent to the golf course.	Fairway Drive requires an improvement towards local non-motorized transportation infrastructure connectivity. Develop a safe, complete, and accessible multi-user citywide bicycle and pedestrian network. Promote non-motorized transportation as a reliable mode of travel within the City.

PRIORITY 3 PROJECTS

Table 41: Priority 3 Projects

PROJECT NUMBER	PROJECT NAME	CITY AREA	PROJECT TYPE	FROM	TO	PROJECT LENGTH (MILES)	PROJECT DESCRIPTION	PURPOSE & NEED
1	**SR A1A / Collins Avenue Protected/buffered bicycle lanes**	South	Bike/Ped	South Pointe Drive	17th Street	1.68	Protected/buffered bicycle lanes *(Lane repurposing and/or roadway widening) Enhanced crosswalks*	SR A1A / Collins Avenue requires an improvement towards local non-motorized transportation infrastructure connectivity. Develop a safe, complete, and accessible multi-user citywide bicycle and pedestrian network. Promote non-motorized transportation as a reliable mode of travel within the City.
2	**Prairie Avenue Neighborhood Greenway**	Middle	Bike/Ped	44th Street	47th Street	0.25	Neighborhood Greenway*(Sharrow Markers) Enhanced crosswalks*	Prairie Avenue requires an improvement towards local non-motorized transportation infrastructure connectivity. Develop a safe, complete, and accessible multi-user citywide bicycle and pedestrian network. Promote non-motorized transportation as a reliable mode of travel within the City.
3	**SR A1A Collins Avenue Exclusive transit lanes**	Middle	Transit	44th Street	SR A1A Collins Avenue / Indian Creek Drive Split	2	Exclusive transit lanes *(Lane repurposing)*	SR A1A Collins Avenue requires an improvement towards regional and local connectivity. Improve the speed, reliability, comfort and convenience of transit. Serve new markets and support economic vitality.

PROJECT NUMBER	PROJECT NAME	CITY AREA	PROJECT TYPE	FROM	TO	PROJECT LENGTH (MILES)	PROJECT DESCRIPTION	PURPOSE & NEED
28	**SR A1A/ Indian Creek Drive Protected Bicycle Lanes**	North	Bike/Ped	Abbott Avenue	Dickens Avenue	0.33	Protected Bicycle Lanes (Lane repurposing and/or roadway widening)	That section of Indian Creek Drive requires an improvement towards local non-motorized transportation infrastructure connectivity. Develop a safe, complete, and accessible multi-user citywide bicycle and pedestrian network. Promote non-motorized transportation as a reliable mode of travel within the City.
29	**15th Street Neighborhood Greenway**	South	Bike/Ped	Washington Avenue	West Avenue	0.66	Neighborhood Greenway *(Bicycle Boulevard Markers) Enhanced crosswalks*	15th Street requires an improvement towards local non-motorized transportation infrastructure connectivity. Develop a safe, complete, and accessible multi-user citywide bicycle and pedestrian network. Promote non-motorized transportation as a reliable mode of travel within the City.
30	**20 Street Neighborhood Greenway**	South	Bike/Ped	Purdy Avenue	Sunset Drive	0.25	Neighborhood Greenway *(Bicycle Boulevard Markers) Enhanced crosswalks*	20th Street requires an improvement towards local non-motorized transportation infrastructure connectivity. Develop a safe, complete, and accessible multi-user citywide bicycle and pedestrian network. Promote non-motorized transportation as a reliable mode of travel within the City.

PROJECT NUMBER	PROJECT NAME	CITY AREA	PROJECT TYPE	FROM	TO	PROJECT LENGTH (MILES)	PROJECT DESCRIPTION	PURPOSE & NEED
34	**Drexel Avenue Neighborhood Greenway**	South	Bike/Ped	Espanola Way	17th Street	0.40	Neighborhood Greenway (Bicycle Boulevard Markers) Enhanced crosswalks	Drexel Avenue requires an improvement towards local non-motorized transportation infrastructure connectivity. Develop a safe, complete, and accessible multi-user citywide bicycle and pedestrian network. Promote non-motorized transportation as a reliable mode of travel within the City.

TPO RESOLUTION #03-2020

RESOLUTION SELECTING THE LOCALLY PREFERRED ALTERNATIVE FOR THE BEACH CORRIDOR OF THE STRATEGIC MIAMI AREA RAPID TRANSIT (SMART) PLAN

WHEREAS, the Interlocal Agreement creating and establishing the Metropolitan Planning Organization (MPO) for the Miami Urbanized Area requires that the Miami-Dade Transportation Planning Organization (TPO), in its role as the MPO, provide a structure to evaluate the adequacy of the transportation planning and programming process; and

WHEREAS, in 2016, the TPO Governing Board adopted Resolution #06-16, which established transit as the "highest priority" in Miami-Dade County. Subsequently, the Governing Board unanimously adopted Resolution #26-16, which approved the Strategic Miami Area Rapid Transit (SMART) Plan in order to implement mass transit projects throughout the County; and

WHEREAS, the SMART Plan includes six (6) rapid transit corridors along with a network of Bus Express Rapid Transit (BERT) services; and

WHEREAS, implementation of the vital rapid transit corridors, in whole or in part, will provide needed transportation alternatives and relief from traffic congestion in Miami-Dade County; and

WHEREAS, the Beach Corridor is one of the six (6) SMART Plan rapid corridors; and

WHEREAS, the Beach Corridor study area is bounded by I-195/Julia Tuttle Causeway on the north; I-395/MacArthur Causeway on the south; I-95 on the west; and Washington Avenue on the east; and

WHEREAS, the Beach Corridor Development and Environment (PD&E) study builds on prior studies dating back to 1988, including a Supplemental Draft Environment Impact Statement (DEIS), which concluded in 2003 with a LPA (TPO Resolution #26-03); and

WHEREAS, the PD&E studies for the six SMART Plan corridors have been funded and are presently in progress, with the Miami-Dade Department of Transportation and Public Works (DTPW) serving as the lead agency for the Beach Corridor,

NOW, THEREFORE, BE IT RESOLVED BY THE GOVERNING BOARD OF THE TRANSPORTATION PLANNING ORGANIZATION IN ITS ROLE AS THE MPO FOR THE MIAMI URBANIZED AREA, that this Board hereby selects the following locally preferred alternative for the Beach Corridor of the Strategic Miami Area Rapid Transit (SMART) Plan as recommended by the Beach Corridor Project Development and Environment (PD&E) Study:

Section 1. For the Beach Corridor Trunkline, which extends from the existing Downtown Metromover Omni Extension along MacArthur Causeway to 5th Street near Washington Avenue, the selected technology is elevated rubber tire vehicles.

Section 2. For the Miami Design District Extension, the selected technology is an extension of the existing Metromover in the median of Miami Avenue to NW 41st Street in the Design District.

Section 3. For the Miami Beach Convention Center Extension, the selected technology is dedicated lanes for bus/trolleys along Washington Avenue.

The adoption of the foregoing resolution was moved by Board Member Eileen Higgins. The motion was seconded by Board Member Jose "Pepe" Diaz, and upon being put to a vote, the vote was as follows:

Chairman Oliver G. Gilbert III -Aye
Vice Chairman Esteban L. Bovo, Jr. -Aye

Board Member Juan Carlos Bermudez	-Aye	Board Member Steven D. Losner	-Aye
Board Member Philippe Bien-Aime	-Absent	Board Member Roberto Martell	-Aye
Board Member Daniella Levine Cava	-Aye	Board Member Joe A. Martinez	-Absent
Board Member Jose "Pepe" Diaz	-Aye	Board Member Jean Monestime	-Aye
Board Member Audrey M. Edmonson	-Aye	Board Member Dennis C. Moss	-Aye
Board Member Perla T. Hantman	-Absent	Board Member Rebeca Sosa	-Aye
Board Member Carlos Hernandez	-Aye	Board Member Javier D. Souto	-Absent
Board Member Sally A. Heyman	-Aye	Board Member Micky Steinberg	-Aye
Board Member Eileen Higgins	-Aye	Board Member Francis Suarez	-Absent
Board Member Barbara J. Jordan	-Aye	Board Member Xavier L. Suarez	-Absent
Board Member Vince Lago	-Aye		

The Chairperson thereupon declared the resolution duly passed and approved this day of 30th day of January, 2020.

Table Notes

Survey/Program: American Community Survey

MEANS OF TRANSPORTATION TO WORK

Universe: Workers 16 years and over

Year: 2019

Estimates: 5-Year

Table ID: B08301

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Source: U.S. Census Bureau, 2015-2019 American Community Survey 5-Year Estimates

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

Workers include members of the Armed Forces and civilians who were at work last week.

2019 ACS data products include updates to several categories of the existing means of transportation question. For more information, see: Change to Means of Transportation.

The 2015-2019 American Community Survey (ACS) data generally reflect the September 2018 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances, the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineation lists due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

An "**" entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
An "-" entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution, or the margin of error associated with a median was larger than the median itself.
An "-" following a median estimate means the median falls in the lowest interval of an open-ended distribution.
An "+" following a median estimate means the median falls in the upper interval of an open-ended distribution.
An "***" entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
An "*****" entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
An "N" entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
An "(X)" means that the estimate is not applicable or not available.

Intersection Summary

Cycle Length: 161
Actuated Cycle Length: 161
Offset: 81 (50%), Referenced to phase 2:NBTL and 6:SBTL, Start of Yellow
Natural Cycle: 90
Control Type: Actuated-Coordinated
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 1: Collins Avenue & Lincoln Road
