PLANTING NOTES: (See plant specification and details for additional standards)

- -All plant material is to be Florida Number 1 or better pursuant to the Florida Department of Agriculture's Grades and Standards for Nursery Plants.
- -All plants are to be top dressed with a minimum 3" layer of Melaleuca mulch, Eucalyptus mulch or equal.
- -Planting plans shall take precedence over plant list in case of discrepancies.
- -No changes are to be made without the prior consent of the Landscape Architect and Owner. Additions and or deletions to the plant material must be approved by the project engineer.
- -Landscape Contractor is responsible for providing their own square footage takeoffs and field verification for 100% sod coverage for all areas specified.
- All landscape areas are to be provided with automatic sprinkler system which provide 100% coverage, and 50% overlap.
- All trees in lawn areas are to receive a 24" diameter mulched saucer at the base of the trunk.
- No mulch, fill or soil will be placed over the rootballs or within 4" of the trunks of the newly installed trees, and the trees will be installed at or slightly above the soil grade.
- All straps, poles and braces shall be removed from all of the installed trees and palms within the 1-year of planting.
- No changes are to be made without the prior consent of the Landscape Architect, owner, City Urban Forester and City Planning Department. Additions and or deletions to the plant material must be approved per the Project Engineer, City Urban Forester and City Planning Department.
- Maintenance on all planters that cannot be serviced within the building will be maintained twice a year as needed. The usage of Golden Creeper was designated for these planters due to its durability and low maintenance.
- Trees are to be planted within parking islands after soil is brought up to grade. Deeply set root balls are not acceptable.
- Planting soil for topsoil and backfill shall be 50/50 mix, nematode free. Planting soil for annual beds to be comprised of 50% Canadian peat moss, 25% salt free coarse sand and 25% Aerolite.
- Tree and shrub pits will be supplemented with "Agriform Pells", 21 gram size with a 20-10-5 analysis, or substitute application accepted by Landscape Architect. Deliver in manufacturer's standard containers showing weight, analysis and name of manufacturer.
- Tree protection fences shall be constructed prior to any construction activity including grubbing for all trees/palms to remain or be relocated. The fences should be of sturdy construction, 4x4 posts with wire mesh. Fences must be intact until the project is completed. They should not be removed or dropped for any reason without authorization from the city Urban Forester. No activity or disturbance should occur within the fenced areas, including vehicle use, storage of materials, dumping of liquids or materials, grade changes, grubbing and mechanical trenching for irrigation, electrical and lighting, etc.

GENERAL NOTES

- -The Landscape Contractor is to locate and verify all underground and overhead utilities prior to beginning work. Contact proper utility companies and / or General Contractor prior to digging for field verification. The Owner and the Landscape Architect shall not be responsible for any damages to utility or irrigation lines (see Roadway Plans for more utility notes).
- -Landscape Contractor is to verify all current drawings and check for discrepancies and bring to the attention of the Landscape Architect prior to commencing with the work.
