TRANSPLANTING SPECIFICATIONS

- 1.Root prune all trees and palms to a minimum depth of 24” for the palms and 48” for the trees.
- 2.Trim frayed roots with clippers saws or similar and leave clean cuts.
- 3.Wrap balls with shrink wrap plastic, back filling with Shredded peat moss, fill up voids between plastic & ball, covering all cut roots.
- 4.Backfill with existing soil to hold plastic firmly against newly wrapped ball. Keep 2” deep trench exposed so as to find root ball when harvesting.
- 5.Water three times per week for next 2 months or until trees are ready to move.
- 6.Horvest palms after 5 weeks minimum and trees after 8 to 10 weeks depending on size. Consult with LA prior to moving on schedule.
- 7.Re–dig holes well outside the pastic plant wrap being careful not to disturb or tear, preserving root ball, re–wrap if needed for transplanting.
- 8.When digging trees, break off large piece of existing coral rock, +/- 36” deep as feasible, by under cutting ball. Do Not Peel Ball off Rock.. If necessary, the horizontal chipping or drilling may be required to break off specimen Oak ball at a minimum 30” depth
- 9.Replant transplanted trees and palms at correct height in new location, keeping original ball top exposed.
10. Properly wrap and hook–up trees and palms to lifting equipment in such a way as to not tear cambium layer and exessivly disfigure appearance.
11. Plants that ore not properly lifted and die due to girdling, compression or excessive damage to the cambium layer will be charged to the G.C. and Sub–contractor at a rate of \$500 per caliper inch.
12. Remove plastic, backfill with 50% existing soil blended with 50% planting soil plus ¼ bale of Canadian peat moss for palms and ½ bale for trees.
13. Backfill, sink, place in Agriform fertilizer tablets per recommendations, brace, and trim broken branches and fronds as needed. Brace per specification.
14. Water daily for duration of overall job will be required. Having bubblers as part of automatic irrigation system for post construction can supplement additional drenching, but are not a sustitution.
