Project: 1134 S. BISCAYNE POINT ROAD
Client: HILSON
Subject: FASTENING PATTERN

By: J.E.
Date: 4/10/95
Page: 1/3

PROBLEM:

ROOF DECK CONSISTS OF 1X T/G WHICH HAS AN ARCHITECTURAL FINISH BELOW. PROVIDE SMALLER NAILS & FASTENING PATTERN TO MAINTAIN EQUIVALENT UPLIFT RESISTANCE.

Using ASCE 7-88 TO COMPUTE UPLIFT:

$$q_z = 0.00256 K_z (IV)^2 \\ = 27.3 \approx \text{PSF}$$

6-5.3.3
 $K_z = .80$ Exp. C
 $I = 1.05$
 $V = 110 \text{ MPH}$

Using Comp of CLADDING < 60'

$h = 11'$ PER Booth & Co.

$$p = q (G_{cp} - G_{cp,i})$$

$$a = .10(24) = 2.4' \leftarrow \\ \text{OR } .4h = .4(11) = 4.4' \\ \therefore 3' \text{ CONTROLS.}$$

$$A_1 = \frac{25 + 18}{2} \times \frac{21 + 53}{2} = 796 \text{ ft}^2$$

$$A_2 = 3(28 + 56 + 21 + 24) = 387 \text{ ft}^2$$

$$A_3 = 9 \text{ ft}^2$$

$$p_1 = 27.3(-1.2 + 0) = 32.8 \text{ PSF}$$

$$p_2 = 27.3(-1.5 + 0) = 41.0 \text{ PSF}$$

$$p_3 = 27.3(+1.0 + 0) = 109.2 \text{ PSF}$$

Material Requirements

TAMKO TAM-PLY IV®	
Fiberglass Ply Sheet	4 plies
Interply Asphalt (Per 100 sq. ft.)	Approx. 92 lbs.
Flood Coat Asphalt (Per 100 sq. ft.)	Approx. 60 lbs.
Gravel (Per 100 sq. ft.)	Approx. 400 lbs.

Slope: Positive drainage up to 3 in. per linear ft. **For slopes above 1 in. per linear ft.,** fastening of the roofing felts is required.

Deck: The deck should conform to TAMKO general requirements.

Insulation: The insulation should be installed according to the manufacturer's specification in the thickness required. The insulation should conform to TAMKO requirements. Polyisocyanurate and expanded polystyrene must have an overlay of a minimum 1/2 in. fiberboard, perlite, or fiberglass roof insulation.

Asphalt: The asphalt should be certified by the manufacturer to meet ASTM D-312, **Type II* for slopes up to 1/2 in.** and **Type III for slopes up to 3 in.**

Fiberglass Ply Sheets: Over the insulation, install **4 plies** of TAM-PLY IV Fiberglass Ply Sheet in specification asphalt. Starting from the low point of the roof, apply a 9 in. width, an 18 in. width, then a 27 in. width. Follow with full 36 in. widths, shingle fashion, lapping each ply 27-1/2 in. in such a manner so that at least 4 plies of ply sheet cover the insulation at any point. Approximately 23 lbs. (±15%) of specification asphalt per 100 sq. ft. should be used to embed each ply.

Surfacing: Apply a flood coat of 60 lbs. (±15%) of specification asphalt per 100 sq. ft. over the entire surface. While hot, embed approximately 400 lbs. of clean roofing gravel or 300 lbs. of slag per 100 sq. ft. of completed roof area.

Flashing: The flashing material **must** be a TAMKO polyester reinforced modified asphalt flashing material.

U.L. Class A Requirements:

Combustible deck: minimum 1/2" plywood, tongue-and-groove decks, etc.; maximum slope 3".

Insulation: any combination, any thickness of perlite, fiberglass, cellular glass, iso, or EPS.

Surfacing: flood coat & gravel.

Noncombustible deck: maximum slope 3".

Insulation: any combination, any thickness of perlite, woodfiber, fiberglass, cellular glass, iso, or EPS.

Surfacing: flood coat & gravel.
