**RE: Terminal Island Miami Beach Trip Generation Comparison - #16207**

Dear Jon Paul,

Terminal Island is located on the south side of the MacArthur Causeway just west of the Miami Beach mainland. The site is occupied by the City of Miami Beach Fleet Management Operations and Sanitary Division, a US Coast Guard station, an FPL station, a cargo terminal, the Fisher Island terminal and a surface parking lot. The project proposes to replace the cargo terminal with a 90-unit luxury high-rise residential condominium. The area of the cargo terminal is approximately 161,700 SF or 3.71 acres. Although sufficient dock space is available for 4 vessels, the facility is approved for the operation of 3 cargo berths.

A trip generation comparison has been completed between the trips generated by the cargo area and the proposed residential development. Trip generation for the existing and proposed land use was estimated using the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 9<sup>th</sup> Edition.

**Existing Use Trip Generation**

Trip generation for this land use was estimated using ITE Land Use Code (LUC) 010, Waterport/Marine Terminal. ITE defines a Waterport/Marine Terminal as areas used for the transfer of materials between land and sea and possibly the storage of these materials. These ports generally contain ship berths for the transferring of cargo in bulk or containerized form. These facilities operate 24 hours a day, 7 days a week and trucks access the site constantly throughout these hours. Trip generation documentation is provided in Attachment A.

The site is currently approved to operate 3 cargo berths for loading containers. ITE only provides data for daily conditions for this land use. Traffic counts and vehicle classification data from 2014 was obtained from a previous study (see Attachment B). A PM peak hour to daily ratio was used to obtain PM peak hour volumes for the existing uses at the site. Vehicle classification counts also show that the majority of the vehicles at this facility are heavy trucks. In fact, nearly all of the heavy vehicles using this site are semi-trucks/tractor-trailers. A summary of the vehicle breakdown is presented in Exhibit 1.

**Exhibit 1  
Existing Driveway Counts Summary**

Daily Trips		PM Peak Hour Trips	
Semi-truck (vpd)	Automobiles (vpd)	Semi-truck (vph)	Automobiles (vph)
219	105	28	3
68%	32%	90%	10%

It is widely recognized that operational characteristics for heavy vehicles is different than passenger vehicles. The *2010 Highway Capacity Manual* (HCM) recommends establishing passenger car equivalencies (PCE) to account for these differences. HCM provides passenger car equivalencies to convert trucks and buses to passenger cars depending on the terrain type. PCEs published by HCM range from 1.5 for level terrain to 4.5 for mountainous terrain. However, HCM considers a heavy vehicle any vehicle with more than 4 wheels including single unit trucks with double rear tires to triple-unit tractor-trailer combinations. Therefore, the use of a 2.0 PCE would appropriately reflect the travel characteristics

at the site. The resulting trip generation based in ITE, as well as the equivalent number of vehicles is summarized in Exhibit 2.

**Exhibit 2  
Existing Use Trip Generation Summary**

Land Use	Intensity	Daily	PM Peak Hour (use ratio from counts)
Waterport/Marine Terminal <i>(ITE LUC 010)</i>	3 Berths	515 vpd 350 trucks / 165 cars <sup>1</sup>	50 vph 45 trucks / 5 cars <sup>1</sup>
Equivalent Passenger Vehicles		865 pcepd	95 pceph

pcepd = passenger car equivalent per day/hour

<sup>1</sup> number of trucks and vehicles was calculated based on the truck percentage from the traffic counts.

It should be noted that the site generates 350 trucks per day and operates on a 24 hour per day/7 day per week schedule resulting in excess of 125,000 trucks on a yearly basis using the facility and impacting the surrounding street network.

**Proposed Use Trip Generation**

Trip generation for the proposed land use was estimated using the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 9<sup>th</sup> Edition. This manual provides gross trip generation rates and/or equations by land use type for free standing facilities. ITE Land Use Code 232, High Rise Condominium was used for the proposed development and results are summarized in Exhibit 3.

**Exhibit 3  
Proposed Use Trip Generation**

Land Use	Intensity	Daily	PM Peak Hour		
			In	Out	Total
High-Rise Condominium/Townhouse <i>(ITE LUC 232)</i>	90 Dwelling Units	563 pvpd	29 pvph	17 pvph	46 pvph

pvpd = passenger vehicle per day/hour

**Trip Generation Comparison**

The proposed residential development will result in the equivalent reduction of 49 passenger vehicles per hour (a 52% reduction) during the PM peak hour and 302 passenger vehicles per day (a 35% reduction). Exhibit 4 shows the results of the trip generation comparison based on ITE rates.

**Exhibit 4  
Trip Generation Comparison**

Land Use	Intensity	Daily	PM Peak Hour		
			In	Out	Total
Proposed Use					
High-Rise Condominium/Townhouse <i>(ITE LUC 232)</i>	90 Dwelling Units	563 pvpd	29 pvph	17 pvph	46 pvph
Existing Use					
Waterport/ Marine Terminal <i>(ITE LUC 010)</i>	3 berth	865 pcepd	45 pceph	50 pceph	95 pceph
Difference		<b>-302 pvpd</b>	<b>-16 pvph</b>	<b>-33 pvph</b>	<b>-49 pvph</b>

It should be noted that the applicant is proposing a luxury condominium. These types of residential developments are high-priced units intended for select residents and are mostly used as second homes or vacation homes. This type of land use generally generates low vehicle traffic during the peak hours of the adjacent streets. Even though ITE provides trip generation rates for the standard High Rise Residential Condominium, these rates greatly overstate the trip generation for the proposed Luxury Condominium land use.

**Conclusions**

The proposed residential development will have significantly less impacts on the traffic operations of the adjacent roadways and intersections. Replacing the current site with a residential development will eliminate in excess of 125,000 heavy truck trips on a yearly basis from the area. Heavy trucks, considering their size and low rate of acceleration in a traffic stream, are responsible for numerous negative effects on traffic operations. As a result, the capacity of signalized intersections declines

significantly as the ratio of heavy trucks in traffic flow increases. Heavy trucks also contribute a significant proportion of regulated ambient emissions. Heavy trucks emit emissions at higher rates than passenger vehicles contributing to the degradation of air quality. Heavy trucks cause more pavement damage than passenger cars increasing the maintenance cost of roadways and bridges.

In conclusion, replacing the cargo terminal with a 90-unit residential development will:

- Reduce the maintenance cost of roadway and bridges
- Reduce the ambient emission, improving the air quality in the area
- Reduced by 52% the number of PM peak hour trips
- Significantly improve the traffic operations and safety of the adjacent roadways and intersections

Please do not hesitate to call me if you have any questions.

Sincerely,

Juan Espinosa, PE  
Vice President - Transportation
